

## **School of Computer Science and Engineering**

## **CURRICULUM AND SYLLABI**

(2023-2024)

B. Tech. Computer Science and Engineering with Specialization in Cyber Physical Systems

#### VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

#### MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

**World class Education**: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research**: An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People**: Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations**: Active collaboration with national & international industries & universities for productivity and economic development.

**Service to Society**: Service to the region and world through knowledge and compassion.

## VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

## MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

## School of Computer Science and Engineering

B. Tech. Computer Science and Engineering with Specialization in Cyber Physical Systems

### PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and Responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

## **B. Tech. Computer Science and Engineering with Specialization in Cyber Physical Systems**

### **PROGRAMME OUTCOMES (POs)**

- PO\_01: Having an ability to apply mathematics and science in engineering applications.
- PO\_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems
- PO\_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints.
- PO\_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data
- PO\_05: Having an ability to use techniques, skills, resources and modern engineering tools necessary for engineering practice
- PO\_06: Having problem solving ability- solving social issues and engineering problems
- PO\_07: Having adaptive thinking and adaptability
- PO\_08: Having a clear understanding of professional and ethical responsibility
- PO\_09: Having cross cultural competency exhibited by working in teams
- PO\_10: Having a good working knowledge of communicating in English
- PO\_11: Having a good cognitive load management [discriminate and filter the available data] skills
- PO\_12: Having interest in lifelong learning

## **School of Computer Science and Engineering**

B. Tech. Computer Science and Engineering with Specialization in Cyber Physical Systems

### PROGRAMME SPECIFIC OUTCOMES (PSOs)

- 1. Analyze, interpret and provide solutions to real life problems related to Cyber Physical Systems domain.
- 2. Develop competency for designing engineered systems that are built from seamless integration of physical system and cyber system.
- 3. Make the student expert in one or more application domain relevant to Cyber Physical Systems.

## **School of Computer Science and Engineering**

BPHY101L	Engineering Physics		L	T	Р	С
			3	0	0	3
Pre-requisite	12 <sup>th</sup> of equivalent	Sy	llab	us v	vers	ion
				1.0	)	
Course Objectiv	res	•				

- 1. To explain the dual nature of radiation and matter.
- 2. To apply Schrödinger's equation to solve finite and infinite potential problems and apply quantum ideas at the nanoscale.
- 3. To understand the Maxwell's equations for electromagnetic waves and apply the concepts to semiconductors for engineering applications.

#### **Course Outcome**

At the end of the course the student will be able to

- 1. Comprehend the phenomenon of waves and electromagnetic waves.
- 2. Understand the principles of quantum mechanics.
- 3. Apply quantum mechanical ideas to subatomic domain.
- 4. Appreciate the fundamental principles of a laser and its types.
- 5. Design a typical optical fiber communication system using optoelectronic devices.

#### Module:1 Introduction to waves

7 hours

Waves on a string - Wave equation on a string (derivation) - Harmonic waves- reflection and transmission of waves at a boundary - Standing waves and their eigenfrequencies - waves with dispersion - Superposition of waves and Fourier method (qualitative) - Wave packet - phase velocity and group velocity.

#### Module:2 | Electromagnetic waves

7 hours

Physics of divergence - gradient and curl - surface and volume integral - Maxwell Equations (Qualitative) - Continuity equation for current densities - Displacement current - Electromagnetic wave equation in free space - Plane electromagnetic waves in free space - Hertz's experiment.

#### Module:3 | Elements of quantum mechanics

7 hours

Need for Quantum Mechanics: Idea of Quantization (Planck and Einstein) - Compton effect (Qualitative) - de Broglie hypothesis - justification of Bohr postulate - Davisson-Germer experiment - Wave function and probability interpretation - Heisenberg uncertainty principle - Gedanken experiment (Heisenberg's microscope) - Schrödinger wave equation (time dependent and time independent).

#### Module:4 | Applications of quantum mechanics

6 hours

Eigenvalues and eigenfunction of particle confined in one dimensional box - Basics of nanophysics - Quantum confinement and nanostructures - Tunnel effect (qualitative) and scanning tunneling microscope.

#### Module:5 Lasers

6 hours

Laser characteristics - spatial and temporal coherence - Einstein coefficients and their significance - Population inversion - two, three and four level systems - Pumping schemes - threshold gain coefficient - Components of a laser - He-Ne, Nd:YAG and  $CO_2$  lasers and their engineering applications.

#### Module:6 Propagation of EM waves in optical fibers

5 hours

Introduction to optical fiber communication system - light propagation through fibers - Acceptance angle - Numerical aperture - V-parameter - Types of fibers - Attenuation - Dispersion-intermodal and intramodal. Application of fiber in medicine - Endoscopy.

#### Module:7 Optoelectronic devices

5 hours

Introduction to semiconductors - direct and indirect bandgap - p-n junction, Sources: LED and laser diode, Photodetectors: PN and PIN

#### Module:8 | Contemporary Topics

2 hours

Guest lectures from Industry and, Research and Development Organisations

**Total Lecture hours:** 

45 hours

#### Text Book(s)

#### **Course Objectives**

- 1. To enable students to have fundamental understanding of the basic concepts of different disciplines of chemistry.
- 2. To provide avenues for learning advanced concepts from school to university
- 3. To empower students with emerging concepts in applied chemistry to be useful in addressing societal needs
- 4. To integrate analytical and computational ability with experimental skills to create individuals competent in basic science and its by-product of its application.
- 5. To offer opportunities to create pathways for self-reliant in terms of knowledge and higher learning

#### **Course Outcomes:**

- 1. Understand the fundamental concepts in organic, inorganic, physical, and analytical chemistry.
- 2. Analyze the principles of applied chemistry in solving the societal issues.
- 3. Apply chemical concepts for the advancement of materials.
- 4. Appreciate the fundamental principles of spectroscopy and the related applications.
- 5. Design new materials, energy conversion devices and new protective coating techniques.

#### Module:1 | Chemical thermodynamics and kinetics

6 hours

Laws of thermodynamics - entropy change (selected processes) - spontaneity of a chemical reaction and Gibbs free energy - heat transfer; Kinetics - Concept of activation energy and energy barrier - Arrhenius equation- effect of catalysts (homo and heterogeneous) - Enzyme catalysis (Michaelis-Menten Mechanism).

#### Module:2 | Metal complexes and organometallics

6 hours

Inorganic complexes - structure, bonding and application; Organometallics - introduction, stability, structure and applications of metal carbonyls, ferrocene and Grignard reagent; Metals in biology (haemoglobin, chlorophyll- structure and property).

#### Module:3 Organic intermediates and reaction transformations

6 hours

Organic intermediates - stability and structure of carbocations, carbanions and radicals; Aromatics (aromaticity) and heterocycles (3, 4, 5, 6 membered and fused systems); Organic transformations for making useful drugs for specific disease targets (two examples) and dyes (addition, elimination, substitution and cross coupling reactions).

#### Module:4 Energy devices

6 hours

Electrochemical and electrolytic cells – electrode materials with examples (semi-conductors), electrode-electrolyte interface- chemistry of Li ion secondary batteries, supercapacitors; Fuel cells:  $H_2$ - $O_2$  and solid oxide fuel cell (SOFC); Solar cells - photovoltaic cell (silicon based), photoelectrochemical cells and dye-sensitized cells.

#### Module:5 | Functional materials

7 hours

Oxides of AB, AB $_2$ , ABO $_3$  type (specific examples); Composites - types and properties; Polymers - thermosetting and thermoplastic polymers - synthesis and application (TEFLON, BAKELITE); Conducting polymers- polyacetylene and effect of doping - chemistry of display devices specific to OLEDs; Nano materials - introduction, bulk vs nano (quantum dots), top-down and bottom-up approaches for synthesis, and properties of nano Au.

#### Module:6 | Spectroscopic, diffraction and microscopic techniques

5 hours

Fundamental concepts in spectroscopic and instrumental techniques; Principle and applications of UV-Visible and XRD techniques (numericals); Overview of various techniques such as AAS, IR, NMR, SEM and TEM.

#### Module:7 Industrial applications

7 hours

Water purification methods - zeolites, ion-exchange resins and reverse osmosis; Fuels and combustion -LCV, HCV, Bomb calorimeter (numericals), anti-knocking agents); Protective coatings for corrosion control: cathodic and anodic protection - PVD technique; Chemical sensors for environmental monitoring - gas sensors; Overview of computational methodologies: energy minimization and conformational analysis.

methodologies, energy minimization and comormational analysis.

Pre-requisite NIL Syllabus version  1.0  Course Objective  To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.  Course Outcome:  At the end of the course the student will be able to  1. Understand the importance and hands-on experience on analysis of metal ions by means of experiments.  2. Get practical experience on synthesis and characterization of the organic molecules and nanomaterials in the laboratory.  3. Apply their knowledge in thermodynamic functions, kinetics and molecular geometries through the experiments.  Indicative Experiments  1. Thermodynamics functions from EMF measurements: Zinc - Copper system  2. Determination of reaction rate, order and molecularity of ethylacetate hydrolysis  3. Colorimetric estimation of Ni <sup>2+</sup> using conventional and smart phone digital-imaging methods  4. Laboratory scale preparation of important drug intermediate - para aminophenol for the synthesis for acetaminophen  5. Magnesium-sea water activated cell - Effect of salt concentration on voltage generation  6. Analysis of iron in an alloy sample by potentiometry  7. Preparation of tin oxide by sol- gel method and its characterization  8. Size dependent colour variation of Cu <sub>2</sub> O nanoparticles by spectrophotometer  9. Determination of hardness of water sample by complexometric titration before and after ion-exchange process  10. Computational Optimization of molecular geometry using Avogadro software  Total Laboratory Hours  8. Solon Bolon Studies  10. Computational Optimization of molecular geometry using Avogadro software  Total Laboratory Hours  Node of assessment: Mode of assessment: Continuous assessment / FAT / Oral examination and others  Recommended by Board of Studies  28.06.2021			ory course and get hand	s-on	ı ex	peri	ence	e of
At the end of the course the student will be able to  1. Understand the importance and hands-on experience on analysis of metal ions by means of experiments.  2. Get practical experience on synthesis and characterization of the organic molecules and nanomaterials in the laboratory.  3. Apply their knowledge in thermodynamic functions, kinetics and molecular geometries through the experiments.  Indicative Experiments  1. Thermodynamics functions from EMF measurements: Zinc - Copper system  2. Determination of reaction rate, order and molecularity of ethylacetate hydrolysis  3. Colorimetric estimation of Ni <sup>2+</sup> using conventional and smart phone digital-imaging methods  4. Laboratory scale preparation of important drug intermediate - para aminophenol for the synthesis for acetaminophen  5. Magnesium-sea water activated cell - Effect of salt concentration on voltage generation  6. Analysis of iron in an alloy sample by potentiometry  7. Preparation of tin oxide by sol- gel method and its characterization  8. Size dependent colour variation of Cu <sub>2</sub> O nanoparticles by spectrophotometer  9. Determination of hardness of water sample by complexometric titration before and after ion-exchange process  10. BMAT102L	Differential Equations and Transforms		L	Т	Р	С
			3	1	0	4
Pre-requisite	BMAT101L, BMAT101P	Syllabus versi		sion		
_		•		1.0	)	•

#### **Course Objectives**

- 1. To impart the knowledge of Laplace transform, an important transform techniques for Engineers which requires knowledge of integration.
- 2. Presenting the elementary notions of Fourier series, this is vital in practical harmonic analysis.
- 3. Enriching the skills in solving initial and boundary value problems.
- 4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems that are inherent in natural and physical processes.

#### **Course Outcomes**

At the end of the course the student should be able to:

- 1. Find solution for second and higher order differential equations, formation and solving partial differential equations.
- 2. Understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution.
- 3. Employ the tools of Fourier series and Fourier transforms.
- 4. Know the techniques of solving differential equations and partial differential equations.
- 5. Know the Z-transform and its application in population dynamics and digital signal processing.

#### Module:1 Ordinary Differential Equations (ODE)

6 hours

Second order non- homogenous differential equations with constant coefficients- Differential equations with variable coefficients- method of undetermined coefficients-method of Variation of parameters-Solving Damped forced oscillations and LCR circuit theory problems.

#### **Module:2** Partial Differential Equations (PDE)

5 hours

Formation of partial differential equations - Singular integrals – Solutions of standard types of first order partial differential equations - Lagrange's linear equation-Method of separation of variables

#### Module:3 Laplace Transform

7 hours

Definition- Properties of Laplace transform-Laplace transform of standard functions - Laplace transform of periodic functions-Unit step function-Impulse function. Inverse Laplace transform-Partial fractions method and by Convolution theorem..

#### Module:4 | Solution to ODE and PDE by Laplace transform

7 hours

Solution of ODE's - Non-homogeneous terms involving Heaviside function, Impulse function - Solving Non-homogeneous system using Laplace transform - solution to First order PDE by Laplace transform.

#### Module:5 | Fourier Series

6 hours

Fourier series - Euler's formulae- Dirichlet's conditions - Change of interval - Half range series - RMS value - Parseval's identity.

#### **Module:6** | Fourier Transform

hours

Complex Fourier transform - properties - Relation between Fourier and Laplace Transforms-Fourier sine and cosine transforms - Parseval's identity- Convolution Theorem and simple applications to solve PDE.

#### Module:7 Z-Transform

6 hours

Definition of Z-transform and Inverse Z-transform - Standard functions - Partial fractions and

BMAT201L	Complex Variables and Linear Algebra		L	Т	Р	С
			3	1	0	4
Pre-requisite	BMAT102L	Sy	llab	us v	ersi	on
				1.0		

#### **Course Objectives**

- 1. To present comprehensive, compact, and integrated treatment of one of the most important branches of applied mathematics namely Complex variables to the engineers and the scientists.
- 2. To present comprehensive, compact, and integrated treatment of another most important branches of applied mathematics namely Linear Algebra to the engineers and the scientists.
- 3. To provide students with a framework of the concepts that will help them to analyse deeply about many complex problems.

#### **Course Outcomes**

At the end of the course the student should be able to

- 1. Construct analytic functions and find complex potential of fluid flow and electric fields.
- 2. Find the image of straight lines by elementary transformations and to express analytic functions in power series.
- 3. Evaluate real integrals using techniques of contour integration.
- 4. Use the power of inner product and norm for analysis.
- 5. Use matrices and transformations for solving engineering problems.

#### Module:1 | Analytic Functions

7hours

Complex variable - Analytic functions and Cauchy - Riemann equations; Laplace equation and Harmonic functions; Construction of Harmonic conjugate and analytic functions; Applications of analytic functions to fluid-flow and electric field problems.

#### Module:2 | Conformal and Bilinear transformations

7 hours

Conformal mapping - Elementary transformations; Translation, Magnification, Rotation, Inversion; Exponential and Square transformations ( $w = e^z$ ,  $z^2$ ); Bilinear transformation; Cross-ratio-Images of the regions bounded by straight lines under the above transformations;

#### Module:3 | Complex Integration

7 hours

Functions given by Power Series - Taylor and Laurent series-Singularities - Poles - Residues; Integration of a complex function along a contour; Statements of Cauchy-Goursat theorem- Cauchy's integral formula-Cauchy's residue theorem-Evaluation of real integrals-Indented contour integral.

#### Module:4 | Vector Spaces

6 hours

Vector space - subspace; linear combination - span - linearly dependent - Independent - bases; Dimensions; Finite dimensional vector space. Row and column spaces; Rank and nullity.

#### Module:5 Linear Transformations

6 hours

Linear transformations - Basic properties; Invertible linear transformation; Matrices of linear transformations; Vector space of linear transformations; Change of bases; Similarity.

#### Module:6 Inner Product Spaces

hours

Dot products and inner products; Lengths and angles of vectors; Matrix representations of inner products; Gram - Schmidt - Orthogonalization.

#### Module:7 Matrices and System of Equations

5 hours

Eigenvalues and Eigen vectors; Properties of Eigenvalues and Eigen vectors; Cayley-Hamilton theorem; System of linear equations; Gaussian elimination and Gauss Jordan methods.

#### Module:8 Contemporary issues:

2 hours

BMAT202L Probability and Statistics		L	T	Р	С
		3	0	0	3
Pre-requisite	BMAT101L, BMAT101P	Syllabus version			sion
			1.	0	

#### **Course Objectives:**

- 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations.
- 2. To analyze distributions and relationship of real-time data.
- 3. To apply estimation and testing methods to make inference and modelling techniques for decision making.

#### Course Outcome:

At the end of the course the student should be able to:

- 1. Compute and interpret descriptive statistics using numerical and graphical techniques.
- 2. Understand the basic concepts of random variables and find an appropriate distribution for analyzing data specific to an experiment.
- 3. Apply statistical methods like correlation, regression analysis in analyzing, interpreting experimental data.
- 4. Make appropriate decisions using statistical inference that is the central to experimental research.
- 5. Use statistical methodology and tools in reliability engineering problems.

#### **Module:1** Introduction to Statistics

6 hours

Statistics and data analysis; Measures of central tendency; Measure of Dispersion, Moments-Skewness-Kurtosis (Concepts only).

#### Module:2 Random variables

8 hours

Random variables- Probability mass function, distribution and density functions-Joint probability distribution and Joint density functions; Marginal, Conditional distribution and Density functions- Mathematical expectation and its properties- Covariance, Moment generating function.

#### Module:3 | Correlation and Regression

4 hours

Correlation and Regression – Rank Correlation; Partial and Multiple correlation; Multiple regression.

#### Module:4 | Probability Distributions

7 hours

Binomial distribution; Poisson distributions; Normal distribution; Gamma distribution; Exponential distribution; Weibull distribution.

#### Module:5 | Hypothesis Testing-I

4 hours

Testing of hypothesis -Types of errors - Critical region, Procedure for testing of hypothesis-Large sample tests- Z test for Single Proportion- Difference of Proportion- Mean and difference of means.

#### Module:6 | Hypothesis Testing-II

9 hours

Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance - One way-Two way-Three way classifications - CRD-RBD- LSD.

#### Module:7 Reliability

5 hours

Basic concepts- Hazard function-Reliabilities of series and parallel systems- System

			0	0	2	1
Pre-requisite	BMAT101L, BMAT101P	Syllabus ve			vers	sion
				1.0	)	

#### Course Objectives:

- 1. To enable the students for having experimental knowledge of basic concepts of statistics using R programming.
- 2. To study the relationship of real-time data and decision making through testing methods using R.
- 3. To make students capable to do experimental research using statistics in various engineering problems.

#### **Course Outcomes:**

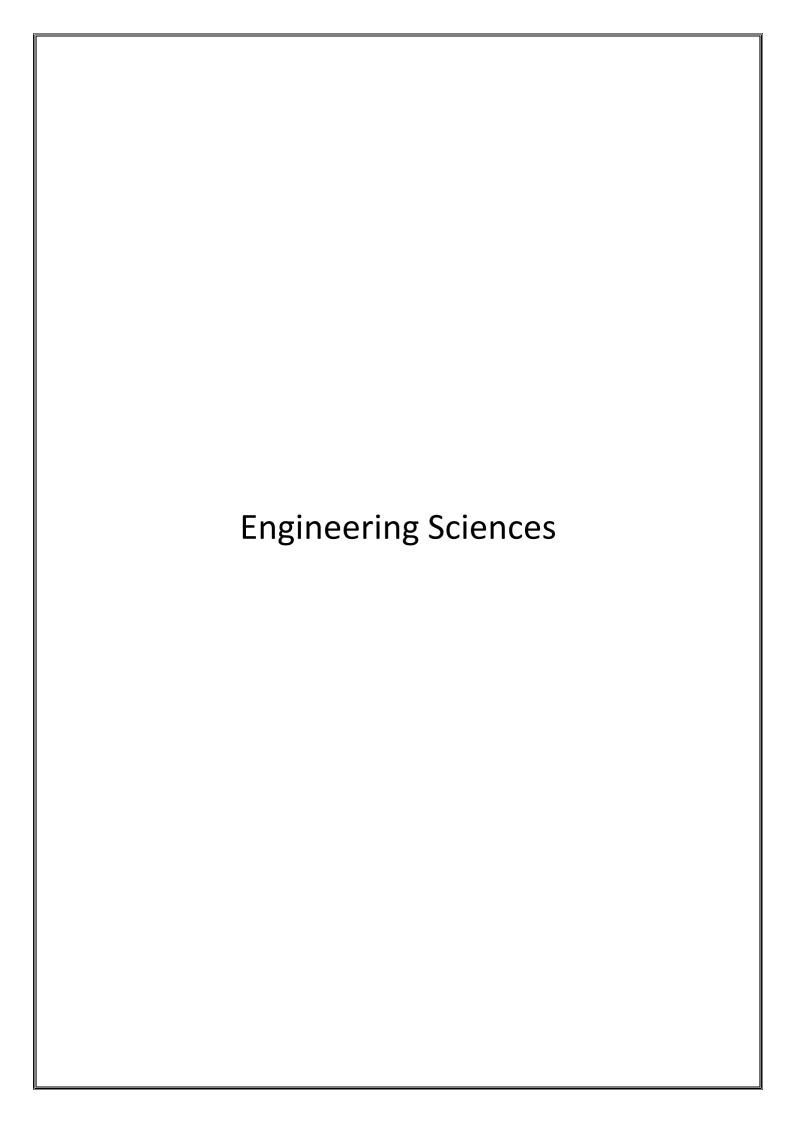

At the end of the course the student should be able to:

- 1. Demonstrate R programming for statistical data.
- 2. Carry out appropriate analysis of statistical methods through experimental techniques using R.

Indi	cative Experiments		
1.	Introduction: Understanding Data types; importing/expo	orting data	T

#### **Course Objectives**

- 1. To impart the basic constructs in structured programming and object-oriented programming paradigms.
- 2. To inculcate the insights and benefits in accessing memory locations by implementing real world problems.
- 3. To help solving real world problems through appropriate programming paradigms.

#### **Course Outcome**

At the end of the course, students should be able to:

- 1. Understand different programming language constructs and decision-making statements; manipulate data as a group.
- 2. Recognize the application of modular programming approach; create user defined data types and idealize the role of pointers.
- 3. Comprehend various elements of object-oriented programing paradigm; propose solutions through inheritance and polymorphism; identify the appropriate data structure for the given problem and devise solution using generic programming techniques.

#### Module:1 C Programming Fundamentals

2 hours

Variables - Reserved words - Data Types - Operators - Operator Precedence - Expressions - Type Conversions - I/O statements - Branching and Looping: if, if-else, nested if, if-else ladder, switch statement, goto statement - Loops: for, while and do...while - break and continue statements.

#### Module:2 | Arrays and Functions

4 hours

Arrays: One Dimensional array - Two-Dimensional Array - Strings and its operations. User Defined Functions: Declaration - Definition - call by value and call by reference - Types of Functions - Recursive functions - Storage Classes - Scope, Visibility and Lifetime of Variables.

#### Module:3 | Pointers

4 hours

Declaration and Access of Pointer Variables, Pointer arithmetic - Dynamic memory allocation - Pointers and arrays - Pointers and functions.

#### Module:4 Structure and Union

2 hours

Declaration, Initialization, Access of Structure Variables - Arrays of Structure - Arrays within Structure - Structure within Structures - Structures and Functions - Pointers to Structure -

## Module:5 Overview of Object-Oriented Programming

5 hours

Features of OOP - Classes and Objects - "this" pointer - Constructors and Destructors - Static Data Members, Static Member Functions and Objects - Inline Functions - Call by reference - Functions with default Arguments - Functions with Objects as Arguments - Friend Functions and Friend Classes.

#### Module:6 Inheritance

5 hours

Inheritance - Types of Inheritance: Single inheritance, Multiple Inheritance, Multi-level

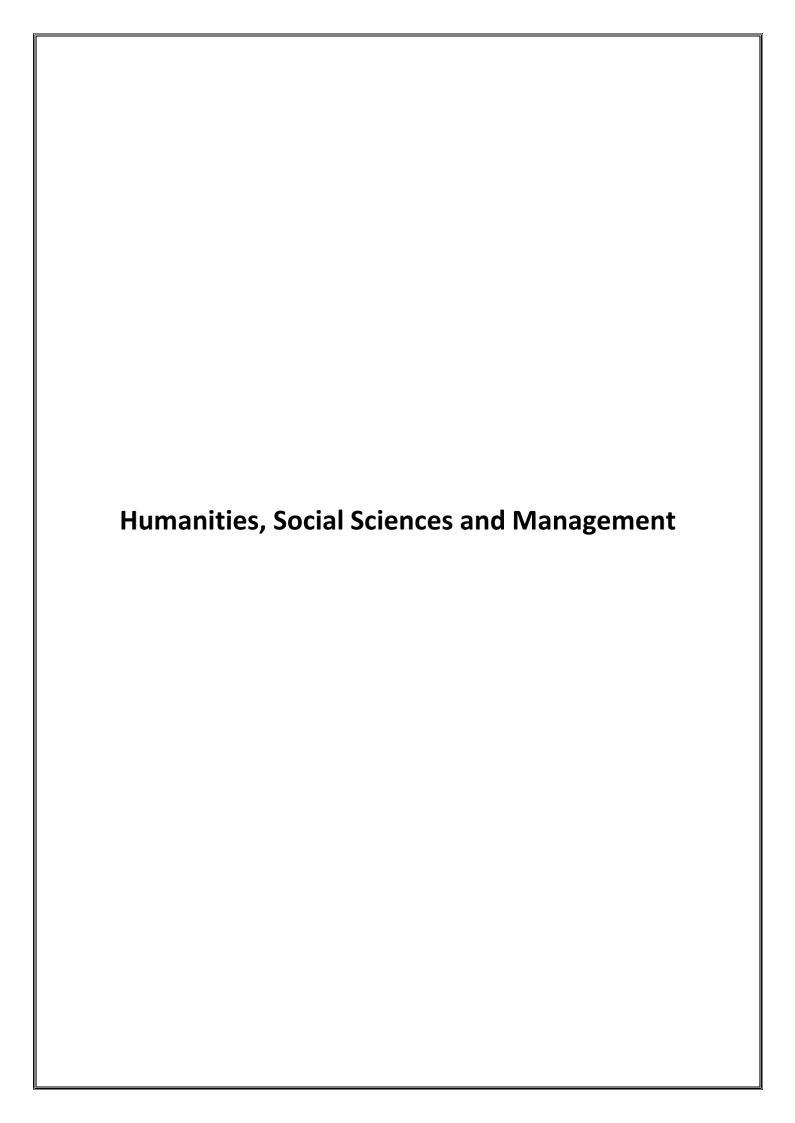

Inheritance, Hierarchical Inheritance - Multipath Inheritance - Inheritance and constructors.									
		,	.a.a.patir iriiror

BECE102L	Digital Systems Design		3	0	0	3
Pre-requisite	Nil	Syllabus version			on	
		1.0				

- 1. Provide an understanding of Boolean algebra and logic functions.
- 2. Develop the knowledge of combinational and sequential logic circuit design.
- 3. Design and model the data path circuits for digital systems.
- 4. Establish a strong understanding of programmable logic.
- 5. Enable the student to design and model the logic circuits using Verilog HDL.

#### **Course Outcome**

At the end of the course the student will be able to

- 1. Optimize the logic functions using and Boolean principles and K-map.
- 2. Model the Combinational and Sequential logic circuits using Verilog HDL.
- 3. Design the various combinational logic circuits and data path circuits.
- 4. Analyze and apply the design aspects of sequential logic circuits.
- 5. Analyze and apply the design aspects of Finite state machines.
- 6. Examine the basic architectures of programmable logic devices.

# Module:1 | Digital Logic

8 hours

Boolean Algebra: Basic definitions, Axiomatic definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Simplification of Boolean functions. Gate-Level Minimization: The Map Method (K-map up to 4 variable), Product of Sums and Sum of Products Simplification, NAND and NOR Implementation. Logic Families: Digital Logic Gates, TTL and CMOS logic families.

#### Module:2 | Verilog HDL

5 hours

Lexical Conventions, Ports and Modules, Operators, Dataflow Modelling, Gate Level Modelling, Behavioural Modeling, Test Bench.

# Module:3 Design of Combinational Logic Circuits

8 hours

Design Procedure, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Decoders, Encoders, Multiplexers, De-multiplexers, Parity generator and checker, Applications of Decoder, Multiplexer and De-multiplexer. Modeling of Combinational logic circuits using Verilog HDL.

# Module:4 Design of data path circuits

6 hours

N-bit Parallel Adder/Subtractor, Carry Look Ahead Adder, Unsigned Array Multiplier, Booth Multiplier, 4-Bit Magnitude comparator. Modeling of data path circuits using Verilog HDL.

## Module:5 Design of Sequential Logic Circuits

8 hours

Latches, Flip-Flops - SR, D, JK & T, Buffer Registers, Shift Registers - SISO, SIPO, PISO, PIPO, Design of synchronous sequential circuits: state table and state diagrams, Design of counters: Modulo-n, Johnson, Ring, Up/Down, Asynchronous counter. Modeling of sequential logic circuits using Verilog HDL.

#### Module:6 Design of FSM

4 hours

Finite state Machine(FSM):Mealy FSM and Moore FSM, Design Example: Sequence detection, Modeling of FSM using Verilog HDL.

#### Module:7 | Programmable Logic Devices

4 hours

Types of Programmable Logic Devices: PLA, PAL, CPLD, FPGA Generic Architecture.

• To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.

#### Course Outcome

At the end of the course the student will be able to

- 1. Design, simulate and synthesize combinational logic circuits, data path circuits and sequential logic circuits using Verilog HDL.
- 2. Design and implement FSM on FPGA.
- 3. Design and implement small digital systems on FPGA.

2. Design and Verilog modeling of Combinational Logic circuits 3. Design and Verilog modeling of various data path elements - Adders 4. Design and Verilog modeling of various data path elements - Multipliers 5. Implementation of combinational circuits – (FPGA / Trainer Kit) 6. Course Code Course Title					Р	С
BECE204L	BECE204L Microprocessors and Microcontrollers					3
Pre-requisite	BECE102L	Sy	Syllabus versi			sion
		1.0				

- 1. To acquaint students with architectures of Intel microprocessors, microcontroller and ARM processors.
- 2. To familiarize the students with assembly language programming in 8051 microcontroller and ARM processor.
- 3. To interface peripherals and I/O devices with the 8051 microcontroller.

#### Course Outcome:

At the end of the course, the student should be able to

- 1. Comprehend the various microprocessors including Intel Pentium Processors
- 2. Infer the architecture and Programming of Intel 8086 Microprocessor.
- 3. Comprehend the architectures and programming of 8051 microcontroller.
- 4. Deploy the implementation of various peripherals such as general purpose input/output, timers, serial communication, LCD, keypad and ADC with 8051 microcontroller
- 5. Infer the architecture of ARM Processor
- 6. Develop the simple application using ARM processor.

# Module:1 Overview of Microprocessors

3 hours

Introduction to Microprocessors, 8-bit/16-bit Microprocessor, Overview of Intel Pentium, I (i3, i5, i7) Series Processor.

# Module:2 Microprocessor Architecture and Interfacing: Intel x86

8 hours

16-bit Microprocessor: 8086 - Architecture and Addressing modes, Memory Segmentation, Instruction Set, Assembly Language Processing, Programming with DOS and BIOS function calls, minimum and maximum mode configuration, Programmable Peripheral Interface (8255), Programmable Timer Controller (8254), Memory Interface to 8086.

#### Module:3 Microcontroller Architecture: Intel 8051

7 hours

Microcontroller 8051 - Organization and Architecture, RAM-ROM Organization, Machine Cycle, Instruction set: Addressing modes, Data Processing - Stack, Arithmetic, Logical; Branching – Unconditional and Conditional, Assembly programming.

#### Module:4 | Microcontroller 8051 Peripherals

5 hours

I/O Ports, Timers-Counters, Serial Communication and Interrupts.

# Module:5 | I/O interfacing with Microcontroller 8051

7 hours

LCD, LED, Keypad, Analog-to-Digital Convertors, Digital-to-Analog Convertors, Sensor with Signal Conditioning Interface.

#### Module:6 ARM Processor Architecture

5 hours

ARM Design Philosophy; Overview of ARM architecture; States [ARM, Thumb, Jazelle]; Registers, Modes; Conditional Execution; Pipelining; Vector Tables; Exception handling.

#### Module:7 | ARM Instruction Set

8 hours

ARM Instruction- data processing instructions, branch instructions, load store instructions, SWI Instruction, Loading instructions, conditional Execution, Assembly Programming.

#### Module:8 Contemporary issues

2 hours

		1.0				

- 1. To familiarize the students with assembly language programming using microprocessor and microcontroller.
- 2. To familiarize the students with Embedded C language programming using microcontroller.
- 3. To interface peripherals and I/O devices with the microcontroller and microprocessor.

## Course Outcome

## Student will be able to

- 1. Showcase the skill, knowledge and ability of programming microcontroller and microprocessor using its instruction set.
- 2. Expertise with microcontroller and interfaces including general purpose input/ output, timers, serial communication, LCD, keypad and ADC.

Indica	ative Experiments [Experiments ເ	using 8086/8	3051/ARM	]						
1	Assembly language programming	of Arithmetic	c/logical o	perations.	6 hours					
2	Assembly language programming	of memory of	perations	).	4 hours					
3	Assembly language programming/ Embedded C programming for interfacing the peripherals: General purpose input/ output, timers, serial communication, LCD, keypad and ADC.

Course Objec	tives:								
1. To add	ess the challenges of the relevance of lattice theoryand	algebr	aic	stru	ıctuı	es			
to comp	outer science and engineering problems.								
<ol> <li>To use Counting techniques, in particular recurrence relations to computer science problems.</li> </ol>									

3. To understand the concepts of graph theory and related algorithm concepts.

#### Course Outcomes:

At the end of this course, students are expected to

- 1. Learn proof techniques and concepts of inference theory
- 2. Use algebraic structures in applications
- 3. Counting techniques in engineering problems.
- 4. Use lattice and Boolean algebra properties in Digital circuits.
- 5. Solve Science and Engineering problems using Graph theory.

5. 501	ve Science and Engineering problems using Graph the	ory.
Module:1	Mathematical Logic	7 hours
Statements	and Notation-Connectives-Tautologies-Equivalence -	Implications-Normal
forms - The	e Theory of Inference for the Statement Calculus - Pred	icate Calculus - Inference
Theory of t	he Predicate Calculus	
Module:2	Algebraic Structures	6 hours
Semigroup	os and Monoids - Groups - Subgroups - Lagrange's T	heorem Homomorphism -
Properties-	Group Codes.	
Module:3	Counting Techniques	6 hours
Basics of c	ounting - Pigeonhole principle - Permutations and com	binations - Inclusion-
exclusion p	principle - Recurrence relations - Solving recurrence re	elations - Generating
functions-S	Solution to recurrence relations.	
Module:4	Lattices and Boolean algebra	6 hours
Partially O	rdered Relations -Lattices as Posets - Hasse Digran	n - Properties of Lattices -
Boolean al	gebra-Properties of Boolean Algebra-Boolean functions	S.
Module:5	Fundamentals of Graphs	6hours
Basic Con	cepts of Graph Theory - Planar and Complete graph	- Matrix representation of
	Graph Isomorphism - Connectivity-Cut sets-Euler and	Hamilton Paths-Shortest
Path algori	thms	
	Trees, Fundamental circuits, Cut sets	6 hours
	operties of trees - distance and centres in tree - Span	
	s- Tree traversals- Fundamental circuits and cut-se	
Module:7	1 5, 5,	6 hours
	raphs - Chromatic number - Chromatic partitioning	- Chromatic polynomial -
	Covering- Four Colour problem.	
Module:8	Contemporary Issues	2 hours

		1.0			

- 1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer and to impart the knowledge of data representation in binary and to understand the implementation of arithmetic algorithms in a typical computer.
- 2. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming.
- To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor.

#### Course Outcomes

On completion of this course, student should be able to:

- 1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machine with different capabilities. Recognize different instruction formats and addressing modes. Validate efficient algorithm for fixed point and floating point arithmetic operations.
- Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction.
- 3. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.
- 4. Assess the performance of IO and external storage systems. Classify parallel machine models. Analyze the pipeline hazards and solutions.

Module:1 Introduction To Computer Architecture and Organization 5 Hours

Overview of Organization and Architecture –Functional components of a computer:

Registers and register files - Interconnection of components - Overview of IAS computer function - Organization of the von Neumann machine - Harvard architecture - CISC & RISC Architectures.

## Module:2 Data Representation and Computer Arithmetic 5 Hours

Algorithms for fixed point arithmetic operations: Multiplication (Booths, Modified Booths), Division (restoring and non-restoring) - Algorithms for floating point arithmetic operations - Representation of nonnumeric data (character codes).

# Module:3 Instruction Sets and Control Unit 9 Hours

Computer Instructions: Instruction sets, Instruction Set Architecture, Instruction formats, Instruction set categories - Addressing modes - Phases of instruction cycle - ALU - Datapath and control unit: Hardwired control unit and Micro programmed control unit - Performance metrics: Execution time calculation, MIPS, MFLOPS.

# Module:4 Memory System Organization and Architecture 7 Hours

Memory systems hierarchy: Characteristics, Byte Storage methods, Conceptual view of memory cell - Design of scalable memory using RAM's- ROM's chips - Construction of larger size memories - Memory Interleaving - Memory interface address map- Cache memory: principles, Cache memory management techniques, Types of caches, caches misses, Mean

memory access time evaluation of cache.

# Module:5 Interfacing and Communication

5 Hours

I/O fundamentals: handshaking, buffering, I/O Modules - I/O techniques: Programmed I/O, Interrupt-driven I/O, Direct Memory Access, Direct Cache Access - Interrupt structures: Vectored and Prioritized-interrupt overhead - Buses: Synchronous and asynchronous - Arbitration.

# Module:6 Subsystems

5 Hours

External storage systems: Solid state drivers - Organization and Structure of disk drives: Electronic- magnetic and optical technologies - Reliability of memory systems - Error detecting and error correcting systems - RAID Levels - I/O Performance

# Module:7 High Performance Processors

7 Hours

Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Pipelining: Two stages, Multi stage pipelining, Basic performance issues in pipelining, Hazards, Methods to prevent and resolve hazards and their drawbacks - Approaches to deal branches - Superscalar architecture: Limitations of scalar pipelines, superscalar versus super pipeline architecture, superscalar techniques, performance evaluation of superscalar architecture - performance evaluation of parallel processors: Amdahl's law, speed-up and efficiency.

Module:8	Contemporary Issues	2 Hours
	Total Lecture Hours	45 Hours

#### Text Book(s)

1 David A. Patterson and John L. Hennessy, Computer Organization and Design -The Hardware / Software Interface 6<sup>th</sup> Edition, Morgan Kaufmann, 2020

#### Reference Book(s)

- 1 Computer Architecture and Organization-Designing for Performance, William Stallings, Tenth edition, Pearson Education series, 2016
- 2 Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Computer organization, Mc Graw Hill, Fifth edition, Reprint 2011.

Mode of Evaluation: CAT, Written Assignments, Quiz and FAT.

Recommended by Board of Studies	04-03-2022		
Approved by Academic Council	No. 65	Date	17-03-2022

BCSE301L	Software Engineering		L	Т	Р	С

		1.0				

- 1. To introduce the essential Software Engineering concepts.
- 2. To impart concepts and skills for performing analysis, design, develop, test and evolve efficient software systems of various disciplines and applications
- 3. Tomakefamiliar about engineering practices, standards and metrics for developing software components and products.

#### **Course Outcomes**

On completion of this course, student should be able to:

- 1. Apply and assess the principles of various process models for the software development.
- 2. Demonstrate various software project management activities that include planning, Estimations, Risk assessment and Configuration Management
- 3. Perform Requirements modelling and apply appropriate design and testing heuristics to produce quality software systems.
- 4. Demonstrate the complete Software life cycle activities from requirements analysis to maintenance using the modern tools and techniques.
- 5. Escalate the use of various standards and metrics in evaluating the process and product.

# Module:1 Overview Of Software Engineering

6 hours

Nature of Software, Software Engineering, Software process, project, product, Process Models

Classical Evolutionary models, Introduction to Agility - Agile Process-Extreme programming - XP Process – Principles of Agile Software Development framework - Overview of System Engineering

# Module:2 Introduction To Software Project Management

6 hours

Planning, Scope, Work break-down structure, Milestones, Deliverables, Cost and Estimates - (Human Resources, Time-scale, Costs), Risk Management, RMMM Plan, CASE TOOLS, Agile Project Management, Managing team dynamics and communication, Metrics and Measurement

## Module:3 | Modelling Requirements

8 hours

Software requirements and its types, Requirements Engineering process, Requirement Elicitation, System Modeling – Requirements Specification and Requirement Validation, Requirements Elicitation techniques, Requirements management in Agile.

# Module:4 | Software Design

8 hours

Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object oriented Design User-Interface Design

## Module:5 Validation And Verification

hours

Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection and Auditing – Regression Testing – Mutation Testing - Object oriented testing - Testing Web based System - Mobile App testing – Mobile test Automation and tools – DevOps Testing – Cloud and Big Data Testing

#### Module:6 | Software Evolution

BCSE302L	Database Systems	L	T	Р	С
		3	0	0	3
Pre-requisite	NIL	Sylla	bus	vers	sion
		1.0			

- 1. To understand the concepts of File system and structure of the database; Designing an Entity-Relationship model for a real-life application and Mapping a database schema from the ER model.
- 2. To differentiate various normal forms, evaluate relational schemas for design qualities and optimize a query.
- 3. To impart the working methodologies of transaction management, understand concurrency control, recovery, indexing, access methods and fundamental view on unstructured data and its management.

#### **Course Outcomes**

On completion of this course, student should be able to:

- 1. Comprehend the role of database management system in an organization and design the structure and operation of the relational data model.
- 2. Develop a database project depending on the business requirements, considering various design issues.
- 3. List the concepts of indexing and accessing methods.
- 4. Explain the concept of a database transaction processing and comprehend the concept of database facilities including concurrency control, backup and recovery.
- 5. Review the fundamental view on unstructured data and describe other emerging database technologies.

# Module:1 Database Systems Concepts and Architecture 4 hours

Need for database systems – Characteristics of Database Approach – Advantages of using DBMS approach - Actors on the Database Management Scene: Database Administrator - Classification of database management systems - Data Models - Schemas and Instances - Three-Schema Architecture - The Database System Environment - Centralized and Client/Server Architectures for DBMSs – Overall Architecture of Database Management Systems

## Module:2 Relational Model and E-R Modeling

6 hours

Relational Model: Candidate Keys, Primary Keys, Foreign Keys - Integrity Constraints - Handling of Nulls - Entity Relationship Model: Types of Attributes, Relationships, Structural Constraints, Relational model Constraints - Mapping ER model to a relational schema - Extended ER Model - Generalization - Specialization - Aggregations.

#### Module:3 | Relational Database Design

6 hours

Database Design – Schema Refinement - Guidelines for Relational Schema - Functional dependencies - Axioms on Functional Dependencies- Normalization: First, Second and Third Normal Forms - Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form - Join dependency and Fifth Normal form

# Module:4 Physical Database Design and Query Processing 8 hours

File Organization - Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing - B+ Tree Indexing - Hashing Techniques: Static and Dynamic Hashing - Relational Algebra - Translating SQL Queries into Relational Algebra - Query Processing - Query Optimization: Algebraic Query Optimization, Heuristic query optimization Rules, Join Query Optimization using Indexing and Hashing - Tuple Relational Calculus.

#### Module:5 Transaction Processing and Recovery

8 hours

Introduction to Transaction Processing - Transaction concepts: ACID Properties of Transactions, Transaction States - Serial and Serializable Schedules - Schedules based on recoverability - Schedules based on Serializability - Conflict Serializability - Recovery Concepts: Log Based Recovery Protocols, Recovery based on deferred update, Recovery techniques based on immediate update - Shadow Paging Algorithm Module:6 | Concurrency Control In Transaction 8 hours **Processing** Concurrent Transactions - Lost Update Problem - Concurrency Control Techniques: Time Stamp Based Protocols, Thomas Write Rule, Lock Based Protocols, Lock Compatibility Matrix, - Two-Phase Locking Protocol - Lock Conversions - Graph Based Protocols for Concurrency Control - Tree Protocol for Concurrency Control - Deadlocks Based on Locks in Transactions - Deadlock Handling Techniques - Transaction Deadlock Detection Techniques – Transaction Deadlock Prevention Techniques – Multi-Granularity Locking for avoiding Transaction Deadlocks Module:7 | NOSQL Database Management 3 hours Introduction, Need of NoSQL, CAP Theorem, different NoSQL data bases: Key-value data stores, Columnar families, Document databases, Graph databases Module:8 | Contemporary Issues 2 Hours Total Lecture hours: 45 hours **Text Book** R. 			3	0	0	3
Pre-requisite	NIL	Syllabus version				
		1.0				

- 1. To introduce the operating system concepts, designs and provide skills required to implement the services.
- 2. To describe the trade-offs between conflicting objectives in large scale system design.
- 3. To develop the knowledge for application of the various design issues and services.

#### **Course Outcomes**

On completion of this course, student should be able to:

- 1. Interpret the evolution of OS functionality, structures, layers and apply various types of system calls of various process states.
- 2. Design scheduling algorithms to compute and compare various scheduling criteria.
- 3. Apply and analyze communication between inter process and synchronization techniques.
- 4. Implement page replacement algorithms, memory management problems and segmentation.
- 5. Differentiate the file systems for applying different allocation, access technique, representing virtualization and providing protection and security to OS.

#### Module:1 Introduction

3 hours

Introduction to OS: Functionality of OS - OS design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, resources - Influence of security, networking, and multimedia.

#### Module:2 OS Principles

4 hours

System calls, System/Application Call Interface – Protection: User/Kernel modes - Interrupts -Processes - Structures (Process Control Block, Ready List etc.), Process creation, management in Unix – Threads: User level, kernel level threads and thread models.

#### Module:3 | Scheduling

) hours

Processes Scheduling - CPU Scheduling: Pre-emptive, non-pre-emptive - Multiprocessor scheduling - Deadlocks - Resource allocation and management - Deadlock handling mechanisms: prevention, avoidance, detection, recovery.

#### Module:4 Concurrency

8 hours

Inter-process communication, Synchronization - Implementing synchronization primitives (Peterson's solution, Bakery algorithm, synchronization hardware) - Semaphores - Classical synchronization problems, Monitors: Solution to Dining Philosophers problem - IPC in Unix, Multiprocessors and Locking - Scalable Locks - Lock-free coordination.

#### **Module:5** | **Memory Management**

7 hours

Main memory management, Memory allocation strategies, Virtual memory: Hardware support for virtual memory (caching, TLB) – Paging - Segmentation - Demand Paging - Page Faults - Page Replacement -Thrashing - Working Set.

# Module:6 Virtualization and File System Management

6 hours

Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - File system interface (access methods, directory structures) - File system implementation (directory implementation, file allocation methods) - File system recovery - Journaling - Soft updates - Log-structured file system - Distributed file system.

# Module:7 | Storage Management, Protection and Security

6 hours

Disk structure and attachment – Disk scheduling algorithms (seek time, rotational latency based)- System threats and security – Policy vs mechanism - Access vs authentication -

Sys	stem pro	otection: Access matrix -	Capability based	systems	- OS: performance, scaling,
futu	ure direc	tions in mobile OS.

Pre-requisite	NIL	Syllabus version			on	
		1.0				

- 1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements.
- 2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication.
- 3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline.

#### **Course Outcomes**

On completion of this course, students should be able to:

- 1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces.
- 2. To summaries the functionality of any special purpose computing system, and to propose smart solutions to engineering challenges at the prototype level.
- 3. To examine the working principle and interface of typical embedded system components, create programme models, apply various optimization approaches including simulation environment and demonstration using debugging tools.
- 4. To evaluate the working principle of serial communication protocols and their proper use, as well as to analyze the benefits and drawbacks of real-time scheduling algorithms and to recommend acceptable solutions for specific challenges.

- 3. To develop intelligent systems by assembling solutions to concrete computational problems

#### **Course Outcomes**

On completion of this course, student should be able to:

- 1. Evaluate Artificial Intelligence (AI) methods and describe their foundations.
- 2. Apply basic principles of AI in solutions that require problem-solving, inference, perception, knowledge representation and learning.
- 3. Demonstrate knowledge of reasoning, uncertainty, and knowledge representation for solving real-world problems
- 4. Analyse and illustrate how search algorithms play a vital role in problem-solving

#### Module:1 | Introduction

6 hours

Introduction- Evolution of AI, State of Art -Different Types of Artificial Intelligence-Applications of AI-Subfields of AI-Intelligent Agents- Structure of Intelligent Agents-Environments

#### Module:2 | Problem Solving based on Searching

6 hours

Introduction to Problem Solving by searching Methods-State Space search, Uninformed Search Methods – Uniform Cost Search, Breadth First Search- Depth First Search-Depth-limited search, Iterative deepening depth-first, Informed Search Methods- Best First Search, A\* Search

#### Module 3 Local Search and Adversarial Search

5 hours

Local Search algorithms – Hill-climbing search, Simulated annealing, Genetic Algorithm, Adversarial Search: Game Trees and Minimax Evaluation, Elementary two-players games: tic-tac-toe, Minimax with Alpha-Beta Pruning.

#### Module:4 Logic and Reasoning

8 hours

Introduction to Logic and Reasoning -Propositional Logic-First Order Logic-Inference in First Order Logic- Unification, Forward Chaining, Backward Chaining, Resolution.

#### Module:5 Uncertain Knowledge and Reasoning

5 hours

Quantifying Uncertainty- Bayes Rule -Bayesian Belief Network- Approximate Inference in Bayesian networks

#### Module:6 Planning

7 hours

Classical planning, Planning as State-space search, Forward search, backward search, Planning graphs, Hierarchical Planning, Planning and acting in Nondeterministic domains – Sensor-less Planning, Multiagent planning

#### Module:7 Communicating, Perceiving and Acting

6 hours

Communication-Fundamentals of Language -Probabilistic Language Processing -Information Retrieval- Information Extraction-Perception-Image Formation- Object Recognition.

#### Module:8 | Contemporary Issues

2 hours

Total Lecture hours: 45 hours

#### **Text Book**

 Russell, S. and Norvig, P. 2015. Artificial Intelligence - A Modern Approach, 3<sup>rd</sup> Edition, Prentice Hall.

BCSE307L	Compiler Design		L	Т	Р	С
			3	0	0	3
Pre-requisite	NIL	Sy	llab	us \	/ers	ion
				1.0		

- 1. To provide fundamental knowledge of various language translators.
- 2. To make students familiar with lexical analysis and parsing techniques.
- 3. To understand the various actions carried out in semantic analysis.
- 4. To make the students get familiar with how the intermediate code is generated.
- 5. To understand the principles of code optimization techniques and code generation.
- 6. To provide foundation for study of high-performance compiler design.

#### **Course Outcomes**

- 1. Apply the skills on devising, selecting, and using tools and techniques towards compiler design
- 2. Develop language specifications using context free grammars (CFG).
- 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems.
- 4. Constructing symbol tables and generating intermediate code.
- 5. Obtain insights on compiler optimization and code generation.

#### Module:1 INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS 7 hours

Introduction to LLVM - Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method) - Lex - A Lexical Analyzer Generator.

#### Module:2 | SYNTAX ANALYSIS

8 hours

Role of Parser- Parse Tree - Elimination of Ambiguity - Top Down Parsing - Recursive Descent Parsing - LL (1) Grammars - Shift Reduce Parsers- Operator Precedence Parsing - LR Parsers, Construction of SLR Parser Tables and Parsing- CLR Parsing- LALR Parsing.

#### Module:3 | SEMANTICS ANALYSIS

5 hours

Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L-attributed Syntax Directed Definition.

#### Module:4 INTERMEDIATE CODE GENERATION

5 hours

Variants of Syntax trees - Three Address Code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.

#### Module:5 | CODE OPTIMIZATION

6 hours

Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis - Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs - Machine Independent Optimization-Implementation of a naïve code generator for a virtual Machine- Security checking of virtual machine code.

#### Module:6 | CODE GENERATION

5 hours

Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment- Runtime Organization- Activation Records.

#### Module:7 | PARALLELISM

7 hours

Parallelization- Automatic Parallelization- Optimizations for Cache Locality and Vectorization- Domain Specific Languages-Compilation- Instruction Scheduling and Software Pipelining- Impact of Language Design and Architecture Evolution on Compilers-Static Single Assignment

#### Module:8 | Contemporary Issues

2 hours

		1.0				

- 1. To gain knowledge about the variety of measuring instruments, their methods of measurement and the use of different sensors and actuators.
- 2. To analyse the concepts associated with multiple sensors, actuators and their working mechanism.
- 3. To apply the ideas towards the realization of various sensor and actuator applications.

#### **Course Outcome**

- 1. Understand and differentiate between the types of sensors/ Transducers
- 2. To realize, characterize and mathematically model a resistive sensor
- 3. To realize, characterize and mathematically model inductive and capacitive sensors
- 4. Analyze different thermal sensors and utilize them for suitable applications
- 5. Analyze various Magnetic & Radiation Sensors and utilize them for suitable applications
- 6. Select a smart sensor for particular application
- 7. To understand the working and recommend appropriate actuator for specific application

#### Module:1 Introduction to Sensors / Transducers

4 hours

Difference between sensor, transmitter and transducer, Principles, Classification, Parameters, Characteristics: Range; resolution, Sensitivity, error, repeatability, linearity and accuracy, impedance, backlash, Response time, Dead band, Environmental Parameters (EP), Characterization.

#### Module:2 RESISTIVE SENSORS

4 hours

Principle of operation, construction details of resistive sensor; Resistive Potentiometer, Strain Gauge, Resistance Strain Gauge, Semiconductor Strain Gauges.

#### Module:3 INDUCTIVE & CAPACITIVE SENSORS

4 hours

Inductive Sensors- Principle of operation, construction details, Sensitivity and Linearity of the Sensor, Types, characteristics and applications of LVDT, Induction potentiometer, variable reluctance transducer, synchros, microsyn; Capacitive Sensors, characteristics of Capacitive transducers, proximity sensor, Ultrasonic Sensors.

#### Module:4 Thermal Sensors

4 hours

Gas thermometric Sensors, Thermal Expansion Type Thermometric Sensors, Acoustic Temperature Sensor, Dielectric Constant and Refractive Index Thermo-sensors, Helium Low Temperature Thermometer, Magnetic Thermometer, Resistance Change Type Thermometric Sensors.

#### Module:5 | Magnetic & Radiation Sensors

4 hours

Sensors and operating Principle, Hall Effect and Sensors, Magneto-resistive Sensors, Anisotropic Magneto-resistive Sensing and Semiconductor Magneto-resistors. Basic Characteristics and Types of Photo sensistors – X-ray and Nuclear Radiation Sensors–Fiber Optic Sensors.

#### Module:6 Smart Sensors

hours

Introduction to Smart Sensors, Information Coding and Processing, Data Communication, Standards for Smart Sensor Interface, Automation. Sensors Applications: Automotive Sensors, Home Appliance Sensors, Aerospace Sensors, Sensors for Manufacturing,

Module:7         Actuators         4 hours           Types of Actuation systems, Directional Control valves, Pressure control valves, Process control valves, Rotary actuators, Mechanical and Electrical Actuation Systems and their applications.         2 hours           Module:8         Contemporary Issues         2 hours           Text Book(s)           1. Pre-requisite	BEEE303L, BEEE303P	Syllabus version				ion
		1.0				

- 1. Understanding the concepts of electrical engineering for development and implementation of different sensors and actuators
- 2. Impart knowledge and skill in the working mechanism of sensors and actuators and their standards
- 3. Facilitate comprehend and identify appropriate sensors and actuators for practical applications

#### **Course Outcomes**

- 1. Understand, analyze and validate the functionality of various sensors and actuators
- 2. Design and develop electrical systems for domestic and commercial applications using various sensors and actuators
- 3. Acquire skills for interpretation of measuring sensor parameters during experimentation
- 4. Attain skills to use modern sensors for electrical energy systems

Indica	Indicative Experiments						
1	Closed loop temperature control using temperature sensors.						
2	LVDT, encoder and tachometer	interface and p	erformar	ice.			
3	Pneumatic components and clos	sed loop syster	n.				
4	Stepper motor drive - closed loop	•	_				
5	Brushless DC motor drive - close	ed loop linear p	ositionin	g.			
6	Shape memory alloy actuator clo	sed loop linea	r position	ing.			
7	Interfacing Data Acquisition Syst	tem Hardware	with Pers	onal Computer.			
8	Verification of characteristics of I	Pressure Sens	or.				
9	Verification of characteristics of	Temperature S	Sensor.				
10	Characteristics of IR Sensor usir	ng NI myRIO.					
11	Characteristics verification of Ha	II effect sensor	r.				
12	Characteristics verification of Str	ain Gauge.

Learn the importance of a good interface design

Understand the importance of human psychology in designing good interfaces

#### **Course Outcomes**

- 1. To design and develop processes and life cycle of Human Computer Interaction
- 2. To analyze product usability evaluations and testing methods
- 3. To apply the interface design standards/guidelines for cross cultural and disabled users
- 4. To categorize, design and develop human computer interaction in proper architectural structures

#### Module: 1 HCI Foundations

6 hours

Input-output channels - Human memory - Thinking: reasoning and problem solving - Emotion - Individual differences - Psychology and the design of interactive systems - Text entry devices - Positioning, pointing and drawing - Display devices - Devices for virtual reality and 3D interaction.

#### Module: 2 Human Factors as HCI Theory

5 hours

Human Information Processing – Task Modeling and Human Problem Solving model - Human Reaction and Prediction of Cognitive Performance - Sensation and Perception of Information - Human Body Ergonomics.

#### Module:3 Design Interaction

7 hours

Shneideman's eight golden rules - Norman's Seven principles - Screen Design - Design goals - Screen planning and purpose - Organizing screen elements - Ordering of screen data and content - screen navigation and flow - Visually pleasing composition - Amount of information - Focus and emphasis - Presentation information simply and meaningfully - Information retrieval on web - Statistical graphics - Technological consideration in interface design - Visual Display Layout - Information Structuring and Navigation - HCI in Software process - Design Rules - HCI for Users with Disability - Mobile devices - Earcon design for aural interface.

#### Module: 4 Interaction Design Models

6 hours

Model Human Processor - Working Memory - Long-Term Memory - Processor Timing - Keyboard Level Model - Operators - Encoding Methods - Heuristics for M Operator Placement - Keyboard Level Model - Application of the Keyboard Level Model - GOMS - CMN - GOMS Analysis - Modeling Structure - State Transition Networks.

#### Module: 5 Interface in HCI

6 hours

Visual Interface -Emotion in HCI - Knowledge driven in HCI - Multi user Interaction - Interface Selection Options - Wire-Framing - Process of design - User focus - Scenarios - Navigation design - Screen design and layout, Iteration and prototyping - Multimedia - Colors.

#### Module: 6 Validation

5 hours

Validations - Usability Testing - Interface Testing - User Acceptance Testing - Heuristic evaluation - Defining user experience - Goals and types of Evaluation - Evaluation through Expert analysis -Evaluation through user Participation - Choosing an evaluation method.

#### Module: 7 Advanced Concepts

8 hours

Augmented and Virtual Reality - Applications of augmented reality - Information and data visualization - Principle of game design - Applications - Games Mobile Ecosystem: Platforms, Mobile Design: Elements of Mobile Design - Collaboration and communication - Face-to-face communication - Conversation - Text-based communication - Group working - Dialog design notations - Diagrammatic notations - Textual dialog notations - Dialog semantics - Dialog analysis and design Human factors and security - Groupware - Meeting

Pre-requisite	BCSE305L	Syllabus versi			on	
		1.0				

- 1. To understand the fundamentals of Communication protocols for Cyber Physical Systems(CPS)
- 2. To explore communication and control design methods for IoT integrated CPS systems
- 3. To understand the different IoT communication technologies and protocols for CPS
- 4. To be familiar with various resource managements and analytics in CPS

#### **Course Outcome:**

Upon Completion of the course, the students will be able to

- 1. Infer the fundamental communication and control for design of Cyber Physical Systems (CPS)
- 2. Comprehend communication layers and Protocol Stack for Internet of Things and Cyber Physical Systems
- 3. Compare and contrast various communication technologies
- 4. Apply various data and resource managements in CPS
- 5. Analyze the integration of CPS with Cloud/fog computing

#### Module:1 Basics of Communications & Control

2 hours

Basics of Communication – Information Measures – Communication channel – Modulation and coding – Networking – Typical Communication Systems – Optimal Control.

#### Module:2 Physical Layer Design

4 hours

Adaptive Modulation – Source coding in CPS – Point to point case, Distributed Case – Physical Dynamics aware Channel decoding – Control-oriented channel coding – Channel coding for Interactive Communication.

#### Module:3 Network Topology Design & Network Operation

4 hours

The Role of WSN/IoT Technologies in CPSs – WSN CPS Architecture – Distinguishing WSN, MANET, M2M, and CPS – Design Challenges and Issues for Routing in WSN within the Context of CPS – Routing Protocols in WSNs for CPSs.

#### Module:4 IoT Network communication Protocols for CPS

6 hours

Physical & Data Link Layers: WiFi, ZigBee, Z-wave, LoRaWAN, NB-IoT, Modbus TCP – PROFINET – M2M.

#### Module:5 | IoT Data communication Protocols for CPS

6 hours

Presentation and application Layers: MQTT – CoAP – AMQP – DDS – HTTP – REST – XMPP

#### Module:6 Data and Resource Management in CPS

2 hours

Data Management Activities – Resource Allocation – Game Theory – Cooperative Relaying

#### Module:7 Computing Aspects in CPS

4 hours

Integration of the Cloud for Cyber-Physical Systems Big Data Analysis for Cyber-Physical Systems – Efficient Protocols for Wireless Power Transfers in Ad Hoc Networks – Fog Computing – Cloud Computing – Emerging Communication Technologies

#### Module:8 | Contemporary Issues:

2 hours

2. Understand design choices to integrate the various physical models of computation with the cyber space

#### **Course Outcomes**

- 1. To understand, analyse and design the communication components, computation models and coordination models of a CPS
- 2. To evaluate the design of CPS system through verification and validation

#### 3. To design coordination models for heterogeneous CPS 4. To state the challenges and the opportunities of CPS Module: 1 | CPS Applications Architecture and Challenges Cyber Physical System Introduction - Applications and Advantages - CPS characteristics -5C Architecture - Technology Platforms in CPS - Abstraction Layers in Computing - Static Vs. Dynamic Systems - Homogenous Vs. Heterogeneous systems - Possibilities and Challenges - Role of Architecture Description Languages. Module: 2 | Components of CPS Physical Space - Sensors and Actuators - Embedded Processors, Input and Output Interfaces - ADC and DAC - Control Systems - Feedback Control systems open and closed loop - Human in the loop predictive model based control systems - Concurrency and Synchronization of components in distributed CPS. **Integrating Physical and Cyber Space** Highly dynamic networked systems - Designing Communication stack in node operating system for CPS - Comparison with Industry 4.0, the Industrial Internet, Machine-to-Machine (M2M) technologies - Issues integrating the heterogeneous physical systems with existing cyberspace. **Models of Computation for CPS** Module: 4 5 hours Ptolemy Tool - Models of Computation - Dataflow models - Process Networks Synchronous Reactive Models - Finite State Machine (all models with case studies and examples). Module: 5 | Discrete Time and Other Modelling Tools 5 hours Discrete Event Models - Hard Firm Soft Real Time Control Systems - Timed Automata Coordination Models for Heterogeneous CPS - Petri Nets - UPPAAL modelling. Module: 6 | Swarmlet Designs 3 hours Building IoT Applications with Accessors - CapeCode - Terra Swarms - Swarm Sensors -Swarm OS (Examples like AprilTags, ClipPlayer and other accessor libraries). 4 hours

## Module: 7 | Case Studies and Applications

Automotive CPS - Vehicular Adhoc Networks - Flying Adhoc Networks (FANETs) - Drones -UAVs - Smart Energy Grids.

Module: 8 **Contemporary Issues** 2 hours

Total Lecture Hours:

30 hours

Course code	Course Title	L	Т	Р	С
BCSE430L	Distributed Real Time Systems	2	0	0	2
Pre-requisite	NIL	Syllab	ous v	ersio	on
		1.0			

- 1. Understand the fundamentals of distributed real-time systems and the problems involved in the design of real-time systems based on multiprocessor architecture
- 2. Learn about clock synchronization and the importance of resource sharing in distributed systems

#### **Course Outcomes**

- 1. To analyze the fundamental principles of real time systems with time and resource limitations
- 2. To construct finite state machine for any real time systems with behavioral time constraints
- 3. To describe resource sharing protocols and real time operating systems for distributed real time applications
- 4. To analyze the significance of real time communication protocols and database in distributed systems

## Module: 1 Introduction 4 hours Overview of real time systems. Embedded systems and reactive systems. Characteristics

Overview of real time systems - Embedded systems and reactive systems - Characteristics - Reliability - Safety critical systems - real time process and applications - Advantages and disadvantages of open-source operating systems.

### Module: 2 Modelling Timing Constraints

3 hours

Hard and soft real time systems - Timing constraints - Classification of different types of timing constraints - Finite state machine - Extended finite state machine.

#### Module:3 Scheduling Real-Time Tasks

4 hours

Basics of real time task scheduling - Types of schedulers - Table driven schedulers - Cyclic schedulers - Event driven scheduling - Rate Monotonic Scheduler (RMS) - Issues in Rate monotonic scheduling - Deadline monotonic scheduling - Earliest Deadline First Scheduling (EDFS) and its issues.

Module: 4 Handling Resource Sharing among Real Time 4 hours Tasks

Resource Sharing Among Real-Time Tasks - Highest Locker and Priority Ceiling Protocols - Analysis of Priority Ceiling Protocol - Handling Task Dependencies.

Module: 5 Scheduling Real-Time Tasks in Shared Memory Multiprocessor and Distributed Systems

5 hours

Real-Time Task Scheduling on Multiprocessors and Distributed Systems - Clock Synchronization in Distributed Real-Time Systems - Internal Clock Synchronization in Presence of Byzantine Clocks.

#### Module: 6 Real-Time Operating Systems

3 hours

General concepts - Issues in real-time operating systems - Unix and Windows as RTOS - Real time POSIX - Open source and Commercial RTOS - Benchmarking real time computer & operating systems

Module: 7 Real-Time Communication and Real-Time 5 hours
Databases

Issues in real time communications - Review of computer networking - Real time communication in a LAN - Performance of two real time communication protocols - Real time communication over packet switched networks - Real time databases.

Module: 8 Contemporary Issues 2 hours

Recommended by Board of Studies	13 – 05 – 2022						
Approved by Academic Council	No.66	Date	16.06.2022				

Course Code	Course Title	L	T	Р	С
BCSE427L	Cognitive Robotics	2	0	0	2
Pre-requisite	NIL	Syll	abus	Vers	sion
		1.0			

- 1. To understand the main types of cognitive (vision, motor control, language, social skills) robots and their driving requirements (engineering operations, navigation, cooperation)
- 2. To understand advanced methods for creating efficient and dynamic cognitive robots.
- 3. To understand the recent literature, and collectively synthesize, clearly explain and evaluate the state of the art in cognitive robotics.
- 4. To apply one or more core reasoning methods to create a simple agent that is driven by goals or rewards.

#### **Course Outcomes**

After the completion of the course, student will be able to:

- 1. Understand how our psychology and neuroscience understanding of behavior and intelligence informs the design of robotics models and applications
- 2. Compare, select and apply different machine learning methods for intelligent behavior in robots.
- 3. Analyze the methods and software/hardware technologies for robotics research and applications.
- 4. Discuss the state of the art in cognitive and intelligent robotics models, and how this leads to the design of future robot applications.

#### Module:1 Introduction 2 hours

Thinking, Cognition, and Intelligence, Defining Intelligence – Embodiment and Its Implications, Synthetic Methodology for Intelligence.

Module:2Cybernetic View of Robot Cognition and Perception4 hoursIntroduction to the Model of Cognition, Visual Perception, Visual Recognition,<br/>Machine Learning, and Robot Cognition.

# Module:3 Intelligent System Design, Cognition Development 5 hours and control

Properties of Complete Agents, Agent Design Principle, Developmental Robot Design, Matching brain and Body Dynamics, Artificial Neural Networks (ANN), Fuzzy Logic, Genetic Algorithms and Other Nature Inspired Methods, Optimal Control using ANN, Introduction to CNN.

#### Module:4 | Map Building

5 hours

Introduction, Constructing a 2D World Map, Data Structure for Map Building, Explanation of the Algorithm, An Illustration of Procedure Map Building.

#### Module:5 Randomized Path Planning

5 hours

Introduction, Representation of the Robot's Environment, Review of configuration spaces, Visibility Graphs, Voronoi diagrams, Potential Fields and Cell

Decomposition, Planning with moving obstacles, Probabilistic Roadmaps, Rapidly exploring random trees, Execution of the Quad tree-Based Path Planner Program. Module:6 | Simultaneous Localization and Mapping (SLAM) 5 hours Problem Definition, Mathematical Basis, Examples: SLAM in Landmark Worlds, Taxonomy of the SLAM Problem, Extended Kalman filter, Graph-Based Optimization Techniques, Particle Methods Relation of Paradigms. Module:7 Robot Programming methods 3 hours Python Robot Programming Methods-: Go-to-Goal Behavior, Avoid-Obstacles Behavior, Hybrid Automata (Behavior State Machine), Follow-Wall Behavior. A Complete Program for autonomous mobile robot. BCSE428L	Autonomous Drones		2	0	0	2
Pre-requisite	NIL	Sylla	abu	S V	ersi	on
				1.0		

- 1. To know the principles of flight and how they apply to robotic drones
- 2. To know different kinds of airframes and how to assemble a drone.
- 3. To know the basics of drone design and how to choose the right components.

#### Course Outcomes

- Understand the evolution and classification of Drones / Unmanned aerial Vehicle (UAVs)
- 2. Gain knowledge on UAVs technology side of things (i.e. sensors, platforms, navigation, power source, communication, range, altitude and speed)
- 3. Illustrate the commercial applications used by various types of drones such as aerial photography, law enforcement surveillance, and border enforcement.
- 4. Discuss Indian government airspace policy, regulations, and a comparison of other international regulations, and risk factors
- 5. Realize the emerging technologies being integrated into the drone market including semi-autonomous and autonomous systems for various applications.

# Module:1 Introduction to Autonomous Drones

4 hours

History of Drones – Types of drones – Airframe – Batteries – Motors – ESC: Electronic Speed Controller – Propellers.

# Module:2 Design Fundamentals

3 hours

Flight Controllers – RC Transmitters – FPV Systems – Telemetry – Timing Gates.

# Module:3 Drone Basics

5 hours

Flight Basics – Preflight Checks – Flight Modes – The Maiden Flight – Roll, Pitch, Throttle & Yaw – Key Skills – Simulators – Manual Mode – GPS Autopilot – Intelligent Flight Modes

# Module:4 Modelling and Control With MATLAB/Simulink 5 hours Implementation

Quadcopter Project: Quadcopter Physical Characteristics, Vehicle Dynamic, Components, Simulink Modelling.

# Module:5 | Stability and control

5 hours

Static stability, Dynamic stability, static stability and control, Longitudinal control, stick forces, directional stability and control, roll stability and control.

# Module:6 Applications

3 hours

Beneficial Drones, Aerial Photography, Mapping and Surveying, Precision Agriculture, Search and Rescue, Infrastructure Inspection, Conservation

Course Code	Course Title		L	Т	Р	С
BCSE428P	Autonomous Drones Lab		0	0	2	1
Pre-requisite	NIL	Sylla	bu	s ve	ersi	on
			1	.0		

- 1. temTo gain insight into the basic elements of commercial-off-the-shelf (COTS) dronesystems used in civilian missions
- 2. To introduce unmanned aerial systems (UAS) including drones and autonomous unmanned aerial vehicles (UAV) with sensors

## **Course Outcomes**

At the end of this course, student will be able to:

- 1. Gain knowledge on UAVs technology side of things (i.e. sensors, platforms, navigation, power source, communication, range, altitude and speed)
- 2. Illustrate the commercial applications used by various types of drones such as aerial photography, law enforcement surveillance, and border enforcement.

# **Indicative Experiments**

- 1. Basic building blocks and 3D Design of a Drone
- 2. Making the drone to be stable and fly autonomously with little human intervention
- 3. Design a control system architecture that will hover a quadcopter
- 4. **Position Control:** To implement a local navigation algorithm through the use of a PID controller.
- 5. Navigation by position:

To implement an autopilot by using the GPS sensor, the IMU, and a position-based PID controller. For this exercise, a simulated 3D world has been designed that contains the quadrotor and five beacons arranged in a cross. The objective is to program the drone to follow a predetermined route visiting the five waypoints in a given sequence. It illustrates the algorithms typically included in commercial autopilots such as ArduPilot or PX4.

6. Following an object on the ground:

To implement the logic that allows a quadrotor to follow a moving object on the ground, using a primary color filter in the images and a vision-based PID controller. The drone keeps its altitude and moves only in a 2D plane.

7. Searching for people to rescue within a perimeter:

The objective of this exercise is to implement the logic of a global navigation algorithm to sweep a specific area systematically and efficiently, in conjunction with visual face-recognition techniques, to report the location of people for subsequent rescue. The drone behavior is typically implemented as a finite state machine, with several states such as go-to-the-perimeter, explore-inside-the-perimeter, or go-back-home.

	orginals and systems		2	1	0	3
Pre-requisite	BMAT102L	Syll	abı	ıs v	ers	ion
			•	1.0		

- 1. To understand the basic attributes of signals and systems.
- 2. To analyse the signals and systems in time and transformed domains such as Fourier, Laplace and Z- transform.
- 3. To understand the concept of sampling process.

#### **Course Outcome**

On studying this course, students will be able to

- 1. Differentiate between various types of signals and understand the implication of operations on signals.
- 2. Understand the terms like causal, dynamic, linear, time invariant and stability of systems. Also, students will be able to compute impulse response of both continuous time and discrete time systems.
- 3. Perform the transformation of CT and DT signals from time domain to frequency domain and understand the concept of distribution of energy as a function of frequency.
- 4. Convert the CT signals to DT signals and vice versa and understand their consequences.
- 5. Processing of bandpass signals through bandpass systems.
- 6. Solve differential and difference equations, with initial conditions, using Laplace and Z transforms respectively.

# Module:1 Continuous Time and Discrete Time signals

7 hours

Signal classification – Types of signals: Unit impulse, unit step, ramp, sign, and exponential signals – Operations on signals – Analogy between vectors and signals – Concept of linearly dependent and independent vectors, Orthogonality – Mean square error – Computation of energy, power, periodicity, Norms and moments of signals, – Distance metrics for signals.

# Module:2 | Continuous Time and Discrete Time systems

7 hours

Classification of systems – Linearity, time invariance, stability, Invertibility, Causality and memory systems. Interconnection of systems. Systems defined by differential & difference equations- Impulse and step response of the systems. Transmission of signals through LTI systems - Convolution and Correlation for CT and DT systems

## Module:3 | Fourier Series

5 hours

The response of LTI systems to complex exponentials, Fourier series representation of Continuous Time Periodic Signals, Gibb's phenomena, Properties of CTFS, Fourier series representation of Discrete Time Periodic Signals, Properties of DTFS, Power spectral density.

# **Module:4** Fourier Transforms

6 hours

Representation of aperiodic continuous signals: The Continuous Time Fourier Transform, The Fourier Transform for Periodic Signals, Properties of CTFT, Systems characterized by linear constant-coefficient Differential Equations.

Representation of aperiodic discrete signals: The Discrete Time Fourier Transform, The Fourier Transform for Periodic Signals, Properties of DTFT, DTFT of systems characterized by linear constant-coefficient Difference Equations. Energy spectral density.

Module:5	Hilbert Transform and processing of Band Pass	6 hours
	signals	

Magnitude and phase response of the systems, Group delay, Representation of bandpass

# **Course Outcome:**

- 1. Demonstrate professional and ethical responsibility.
- 2. Understand the impact of engineering solutions in a global, economic, environmental and societal context.
- 3. Develop the ability to engage in research and to involve in life-long learning.

No. 65

4. Comprehend contemporary issues.

Approved by Academic Council

4. Comprehend contemporary issues.				
Module Content				
Four weeks of work at industry site.				
Supervised by an expert at the indust	try.			
Mode of Evaluation: Internship Report, Presentation and Project Review				
Recommended by Board of Studies	d by Board of Studies 09-03-2022			

Date

17-03-2022

BCSE497J	Project - I	L T	T	Р	С
BC3E4973	Project - I	0	0	0	3
Pre-requisite	NIL	Syllabus versi		ion	
		1.0			

To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.

#### **Course Outcome:**

- 1. Demonstrate professional and ethical responsibility.
- 2. Evaluate evidence to determine and implement best practice.
- 3. Mentor and support peers to achieve excellence in practice of the discipline.
- 4. Work in multi-disciplinary teams and provide solutions to problems that arise in multi-disciplinary work.

## **Module Content**

Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.

Can be individual work or a group project, with a maximum of 3 students.

In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.

Carried out inside or outside the university, in any relevant industry or research institution.

Publications in the peer reviewed journals / International Conferences will be an added advantage.

**Mode of Evaluation:** Assessment on the project - project report to be submitted, presentation and project reviews

Recommended by Board of Studies	09-03-2022

Pre-requisite	NIL	Syll	abus	vers	ion
		1.0			

To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.

#### **Course Outcome:**

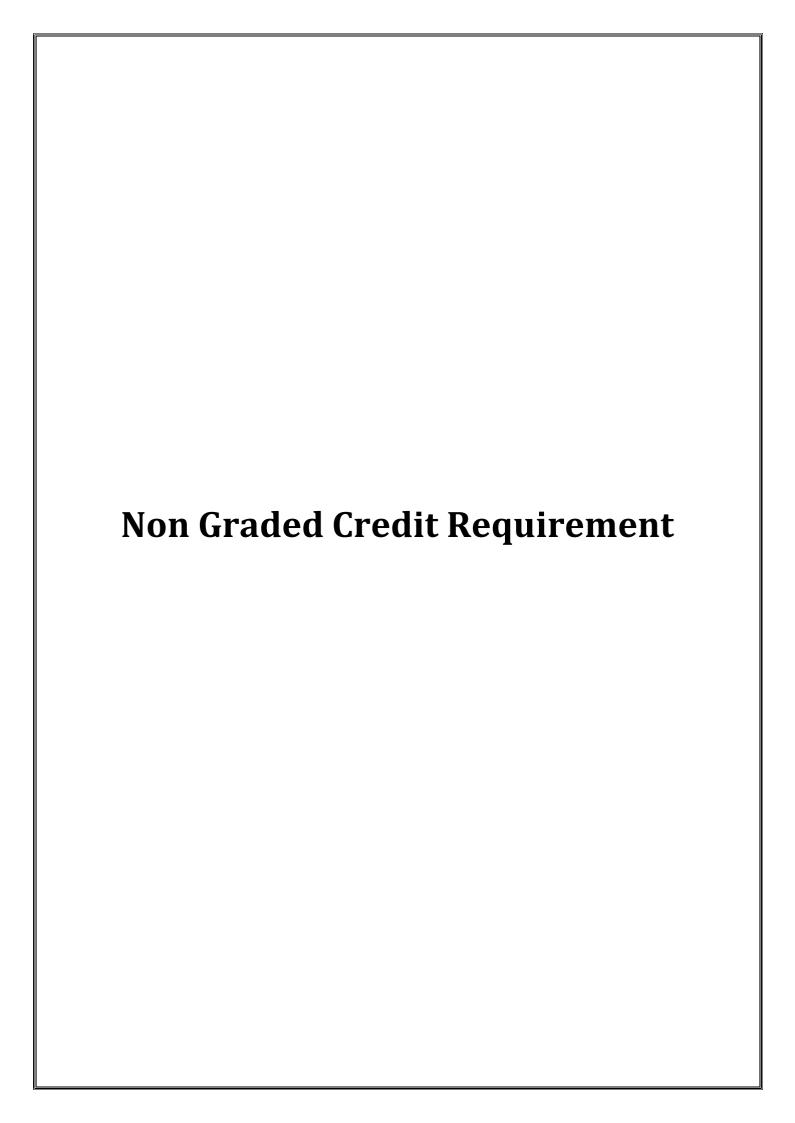

- 1. Formulate specific problem statements for well-defined real life problems with reasonable assumptions and constraints.
- 2. Perform literature search and / or patent search in the area of interest.
- 3. Conduct experiments / Design and Analysis / solution iterations and document the results.
- 4. Perform error analysis / benchmarking / costing.
- 5. Synthesize the results and arrive at scientific conclusions / products / solution.
- 6. Document the results in the form of technical report / presentation.

#### **Module Content**

- 1. Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.
- 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations.
- 3. Can be individual work or a group project, with a maximum of 3 students.
- 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.
- 5. Carried out inside or outside the university, in any relevant industry or research institution.
- 6. Publications in the peer reviewed journals / International Conferences will be an added advantage.

**Mode of Evaluation: :** Assessment on the project - project report to be submitted, presentation and project reviews.

BCSE101N	Introduction to Engineering		L	Т	Р	С
			0	0	0	1
Pre-requisite	Nil	Syllabus version		ion		
		1.0				

- To make the student comfortable and get familiarized with the facilities available on campus
- To make the student aware of the exciting opportunities and usefulness of engineering to society
- To make the student understand the philosophy of engineering

#### Course Outcome:

- To know the infrastructure facilities available on campus
- To rationally utilize the facilities during their term for their professional growth
- To appreciate the engineering principles, involve in life-long learning and take up engineering practice as a service to society

## **General Guidelines**

- Student should observe and involve in the activities during the induction programme.
  Both general activities and those which are discipline-specific should be included
  here.
- 2. Student should get familiarized with the infrastructure facilities available on campus during the general induction, school induction programme and also from the institutional website.
- 3. Student should attend the lecture by industries, including those on career opportunities, organized by the School and probably involve in 'Do-it-yourself' projects or projects involving reverse-engineering.
- 4. Activities under 'Do-it-Yourself' will be detailed by the School.
- Student should prepare a report on the activities and observations, as per the specified format, and submit the same in institutional LMS, VTOP for further evaluation

General instruction on formatting: Document to be prepared with the titles given in the template; Arial type with font size of 12 to be used; photographs can be included in the document as per the requirement; 1.5 line spacing to be used.

Mode of Evaluation: Evaluation of the submitted report and interaction with the students

BSSC101N	Essence of Traditional Knowledge		L	T	Р	С
			0	0	0	2
Pre-requisite	Nil	Syllabus versio		on		
		1.0				

- 1. To impart the knowledge on Indian tradition and Culture.
- 2. To enable the students to acquire the traditional knowledge in different sectors.
- 3. To analyze and understand the Science, Management and Indian Knowledge System.

## Course Outcomes:

- 1. Familiarize the concept of Traditional Indian Culture and Knowledge.
- 2. Explore the Indian religion, philosophy and practices.
- 3. Analyze and understand the Indian Languages, Culture, Literature and Arts.
- 4. Gives a clear understanding on the Indian perspective of modern scientific world and basic principles of Yoga and holistic health care system of India.
- 5. Enable knowledge on Legal framework and traditional knowledge.

# Module:1 Introduction to Traditional Knowledge

Traditional knowledge: Definition, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge, characteristics, Traditional knowledge vis-avis Indigenous knowledge, Traditional knowledge Vs Western Knowledge.

# Module:2 | Culture and Civilization

Introduction to Culture and Civilization, Culture and Heritage, Characteristics features of Indian Culture, Importance of Culture, Cultural practices in Ancient India, Medieval India and Modern India.

# Module:3 Languages and Literature

Indian Languages and Literature: the role of Sanskrit, significance of scriptures to current society, Indian philosophies, other Sanskrit literature and literatures of South India.

# Module:4 | Religion and Philosophy

Religion and Philosophy: Religion and Philosophy in ancient India, Religion and Philosophy in Medieval India, Religious Reform Movements in Modern India (selected movements only).

## Module:5 | Fine Arts in India

Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama. Science and Technology in India, Development of science in ancient, medieval and modern India. Traditional Medicine – Herbal Healing - Yoga and Pranayama practices.

# Module:6 Traditional Knowledge in different sectors

Traditional knowledge and engineering, Traditional medicine system, Traditional knowledge in agriculture, Dependence of Traditional Societies on food and healthcare needs; Importance of conservation and sustainable development of environment, Management of biodiversity and Protection of Traditional knowledge.

# Module:7 Legal framework and Traditional Knowledge

Introduction on Legal framework and Traditional Knowledge: The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act); The Biological Diversity Act 2002 and Rules 2004, The protection of traditional knowledge bill, 2016.

BCHY102N	Environmental Sciences		L	T	Р	С
			0	0	0	2
Pre-requisite	NL .	Syl	Syllabus version			ion
			1.0			

The course is aimed at students to

- 1. Understand and appreciate the unity of life in all its forms and their implications of life style on the environment.
- 2. Identify the different causes for environmental degradation.
- 3. Analyze individual's contribution to environmental pollution.
- 4. Evaluate the impact of pollution at the global/local level and find solutions for remediation.

#### **Course Outcomes**

At the end of the course, the students will be able to:

- 1. Recognize the environmental issues in a problem-oriented, interdisciplinary perspective.
- 2. Classify the key environmental issues, the science behind those problems and potential solutions.
- 3. Demonstrate the significance of biodiversity and its preservation.
- 4. Identify various environmental hazards.
- 5. Design various methods for the conservation of resources.
- 6. Formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects.

# Module: 1 Environment and Ecosystem

5 hours

Environment: definition; Earth—life support system. Ecosystem definition, components and types. Key environmental problems, their basic causes and sustainable solutions. Food chain, food web and their significance, Energy flow in ecosystem; Ecological succession-stages involved, primary and secondary succession - hydrarch, mesarch, xerarch.

#### Module: 2 Biodiversity

4 hours

Biodiversity-definition, levels and importance. Species: roles: types: extinct, endemic, endangered and rare species. Hot-spots —Significance, Mega-biodiversity. Threats to biodiversity due to natural and anthropogenic activities, Conservation methods. GM cropsadvantages and disadvantages.

# Module: 3 Sustaining Environmental Quality

4 hours

Environmental hazards: definition, types, causes and solutions: Biological (Malaria, COVID-19), Chemical (BPA, heavy metals), and Nuclear (Chernobyl); Air, water and soil quality management and conservation; Solid waste management methods.

# Module: 4 Clean and Green Energy

5 hours

Renewable energy resources: Solar energy-thermal and photovoltaic; Hydroelectric energy. Wind energy, Ocean thermal energy; Geothermal energy; Energy from biomass; Hydrogen energy; Solar-hydrogen revolution. Electric and CNG vehicles.

# Module: 5 | Environmental Protection Policies

4 hours

Environmental Protection (EPA) objectives; Air Act, water Act, Forest conservation Act and Wild life protection Act. Environmental Impact Analysis: guidelines, core values. Impact assessment methodologies.

# Module: 6 | Sustainable development

4 hours

Effect of population-urban environmental problems; Population age structure; Sustainable human societies: tools in economics, sustainable development goals SDGs and promoting awareness. Women and child welfare, Women empowerment.

# Module: 7 Global Climate Change

4 hours

Global climate change and green-house effect. Kyoto Protocol-carbon credits, The Paris Agreement, carbon sequestration: definition, types and methodologies. Ozone layer depletion: causes and impacts. Mitigation of ozone layer depletion- Montreal Protocol. Role of Information Technology in environment.

#### **Total Lecture hours:**

30 hours

Assessment: Seminars, Quiz, Case Studies, Final Assessment Test.

BHUM101N	Ethics and Values		L	Т	Р	С
			0	0	0	2
Pre-requisite	Nil	Syl	llabı	us v	ersi	on
		1.0				

- 1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity.
- 2. To understand the negative health impacts of certain unhealthy behavior.
- 3. To appreciate the need and importance of physical, emotional health and social health.

## **Expected Course Outcomes:**

- 1. Students will be able to:
- 2. Follow sound morals and ethical values scrupulously to prove as good citizens.
- 3. Understand various social problems and learn to act ethically.
- 4. Understand the concept of addiction and how it will affect the physical and mental health
- 5. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects.
- 6. Identify the main typologies, characteristics, activities, actors and forms of cybercrime.

# Module:1 | Being Good and Responsible

Gandhian values such as truth and non-violence - Comparative analysis on leaders of past and present - Society's interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society.

## Module:2 | Social Issues 1

Harassment - Types - Prevention of harassment, Violence and Terrorism.

# Module:3 | Social Issues 2

Corruption: Ethical values, causes, impact, laws, prevention - Electoral malpractices;

White collar crimes - Tax evasions - Unfair trade practices.

# Module:4 | Addiction and Health

Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention - III effects of smoking - Prevention of Suicides;

Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases.

#### Module:5 Drug Abuse

Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention.

## Module:6 Personal and Professional Ethics

Dishonesty - Stealing - Malpractices in Examinations - Plagiarism.

## Module:7 | Abuse of Technologies

Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking websites.

		1.0			

The course gives students the necessary background to:

- 1. Develop language competencies for effective communication in French.
- 2. Provide insights into the French culture and make them understand the nuances through communication activities.
- 3. Enable the students to communicate effectively in general and in a professional context.

#### **Course Outcome**

The students will be able to:

- 1. Acquaint with the basics of the French Language.
- 2. Comprehend the various parts of speech and grammar concepts to frame basic sentences in French.
- 3. Translate and acquire knowledge on a broad range of printed materials for general, specific, and practical information.
- 4. Acquire and explain the culture of French people through the language studied in the class.

# Module:1 | Saluer et se presenter:

6 hours

Les Alphabets, Les Salutations, Les nombres (0-100000), L'heure, Les jours de la semaine, Les mois de l'année, Les Pronoms personnels sujets, La conjugaison des verbes réguliers (Les verbes ER) / irréguliers (avoir / être)

## Savoir-faire et savoir-agir :

Saluer, Se présenter, Présenter quelqu'un, Donner des informations, Discuter de la classe / l'université.

# Module:2 L'activitéinteractive:

6 hours

La Nationalité du Pays, Les articles définis / indéfinis, Les prépositions de lieu et l'article contracté, L'heure en français, La Couleur, La conjugaison des verbes - habiter / venir/Aller etc.

# Savoir-faire et savoir-agir :

Localiser des lieux dans une ville, Exprimer l'heure en français et Échanger des informations sur un hébergement.

# Module:3 Les activités quotidiennes:

4 hours

Les adjectifs possessifs, L'accord des adjectifs, Les pronoms toniques, La conjugaison du verbe 'faire' avec du, de la, de l', des. L'interrogation avec combien / comment / où etc. L'adjectif démonstratif, L'adjectif interrogatif, La traduction simple (français-anglais/anglais-français)

# Savoir-faire et savoir-agir :

Parler de la famille, Décrire une personne, parler de nos goûts, parler de nos activités.

# Module:4 S'exprimer:

4 hours

Les parties du corps. Avoir mal à + les parties du corps

La conjugaison des verbes pronominaux, La conjugaison des verbes réguliers (ir) et les autres verbes tels que -lire, écrire, pouvoir, vouloir, devoir, et sortir.

## Savoir-faire et savoir-agir :

Parler de nos quotidiennes, proposer une sortie, inviter, accepter et refuser une invitation.

## Module:5 | La culturefrançaise:

3 hours

La gastronomie française. Les endroits. Le présent progressif, L'article partitif, Mettez les phrases au pluriel et faites des phrases avec les mots donnés, Trouvez les questions.

# Savoir-faire et savoir-agir :

Décrire une journée extraordinaire, Répondre aux questions générales en français, Faire

des phrases.

BGER101L	German I	L	Т	Р	С
		2	0	0	2
Pre-requisite	NIL	Sylla	bus	vers	sion
		1.0			

The course gives students the necessary background to:

- 1. Demonstrate proficiency in reading, writing, and speaking in basic German.
- 2. Communicate in German in everyday situations.
- 3. Understand German culture and adapt in German speaking countries or to work with German speaking people.

## Course Outcome

The students will be able to:

- 1. Understand basic expressions, words, signs and simple conversations.
- 2. Understand and translate short texts, simple descriptions, directions and illustrated narratives about daily activities.
- 3. Write grammatically correct sentences, short paragraphs, informal letters/e-mails, post cards etc... on matters of personal relevance and describe places and people in a simple language.
- 4. Use German in easy day-to-day conversations and demonstrate understanding of German culture.

# Module:1 Die ersteBegegnung

4 hours

Grüßen und Verabschieden; sich und andere vorstellen; Namen, Telefonnummer und E-Mail-Adresse buchstabieren; Zahlen bis 100 und mehr nennen; über Länder, Sprachen und Nationalitäten sprechen.

Wortschatz: Begrüßungen, verabschieden, das Deutsche Alphabet, Zahlen, Länder und Sprachen

Grammatik: "W" Fragen, Aussagesätze, Personalpronomen im Singular und Verbkonjugation (sein/kommen/wohnen/lernen/studieren/sprechen/buchstabieren), Bestimmter Artikel

Schreiben: sich und andere vorstellen

# Module:2 Hobbys und Berufe

4 hours

Über Hobbys und Freizeitaktivitäten sprechen; Wochentage und Monate nennen; die Uhrzeit nennen; über Arbeit, Berufe und Arbeitszeiten sprechen;

Wortschatz: Hobbys und Berufe, Uhrzeiten

Grammatik: Regel-und-Unregelmäßigen verbkonjugationen, haben konjugatio, Bestimmter und Unbestimmter Artikeln, Ja/Nein Fragen, die entsprechende Präpositionen (um/am/im/von...bis), Negation (nicht vs kein), Verbpositionen und Wortfolge

Schreiben: Was machst du in deiner Freizeit?

## Module:3 Familie

4 hours

über Familie sprechen;

Wortschatz: Familie

Grammatik: Possessivpronomen, Nominativ und Akkusativ (Artikel und Personalpronomen)

Schreiben: ..Meine Familie"

# Module:4 Essen und Trinken

- 1. To familiarize the basic concepts of organizational behavior.
- 2. To understand, evaluate, and manage individual and group behavior effectively in an organization.
- 3. To formulate appropriate strategies based on individual and group behaviour.

#### **Course Outcomes**

#### At the end of the course, the students will be able to

- 1. Appraise the basic organizational and individual behaviour.
- 2. Describe the various dimensions of motivations.
- 3. Measure and monitor different aspects of stress and emotions.
- 4. Explain the various elements of groups and teams.
- 5. Analyze the different dimensions of organizational structure, culture, and change.
- 6. Formulate leadership traits for effective work culture.

#### Module:1 Organisational Behaviour - Essentials

5 hours

Understanding organizational behaviour, learning style, OB model, demographic and cultural diversity in organizations, ethical behaviour, tools of OB research, and challenges and opportunities for OB.

#### Module:2 Attitudes, Personality, and Values

7 hours

Individual attitudes, attitudes and behaivour, job attitudes, job satisfaction, job dissatisfaction, job satisfaction and job performance, personality frameworks, personality traits in OB, personality and situations, understanding values, values and workplace, and international values.

#### Module:3 | Motivation

7 hours

Theories of motivation - need-based and process-based theories, designing a motivating environment, motivating employees through job design, employee involvement, benefits, and rewards to employees, and goal setting.

#### **Module:4** | Managing Stress and Emotions

4 hours

Meaning of stress, sources of stress, consequences of stress at work, avoiding and managing stress, understanding emotions, sources of emotions, and emotional intelligence.

#### Module:5 Group Behaviour, Work Teams, and Communications

8 hours

Group development, group size and dynamics, difference between groups and teams, types of teams, team design characteristics, management of teams, and barriers to effective teams, communication - functions, directions, and modes of communication, barriers to effective communication, power and politics, and conflict and negotiation.

#### Module:6 | Organizational Structure, Culture, and Change

6 hours

Different types of organizational structures - common and alternate designs, organizational designs and employee behaviour, organizational culture - role of culture in organizations, creating and sustaining organizational culture, organizational change - forces, resistance,

and	approc	aches to organizational change	<u> </u>

Pre-requisite	NIL	Syll	abu	s v	ersi	on
			1	1.0		

- 1. To learn the dynamics of consumer behavior and market.
- 2. To critically evaluate various factors influencing the buying behavior of individuals.
- 3. To execute consumer research survey based on the given problem.

#### **Course Outcomes**

#### At the end of the course, the students will be able to

- 1. Appraise the basics of consumer behavior and consumer decision making process.
- 2. Analyze psychological and personal factors that influence consumer behavior.
- 3. Evaluate social, cultural, and digital influence on consumer behavior.
- 4. Associate various theories of consumer behavior in consumer decision making process.
- 5. Comprehend the significance of marketing and consumer ethics.
- 6. Apply consumer research process for a given problem.

#### Module:1 Consumer Behavior - Basics 5 hours

Evolution of consumer behavior, dynamism in consumer behavior, consumer behavior and technology, market segmentation, targeting, and positioning, customer value, satisfaction, and retention, effects of marketing mix on consumer behavior, consumer decision making and integration of various disciplines, and consumer decision making process.

#### Module:2 Psychological Influence - Perception and Learning 6 hours

Meaning of perception, components of perception, perception process, theories of perception, perception level, challenges in formulating consumer perception, perception and semiotics, perception and positioning, perceived quality and perceived risk, meaning of learning, elements of learning, categories of learned behavior, dimensions of learning, theories of learning, and learning and memory.

#### Module:3 Psychological Influence - Motivation, Beliefs, and Attitude 6 hours

Types of motives, drivers of motivation, categories and theories of motivation, consumers' emotions, motivation and decision making, types of beliefs and consumer behavior, elements and characteristics of attitude, attitude formation, tri-component model of attitude, multi-attribute models, cognitive dissonance, and conflict resolution.

#### Module:4 Personal, Social, and Cultural Influence 9 hours

Understanding personality, elements of personality, personality theory, self-concept, personality traits, anthromorphism, elements and categories of lifestyle, values and lifestyle, approaches to marketing strategies based on personality and lifestyle, types of reference groups, role of reference groups, impact of reference groups on marketing strategies, family and consumer behavior, family structure, family life cycle, cultural influence on consumer behavior, cultural theories, Indian culture and socialization, and effect of cross-cultures on consumer behavior.

#### Module:5 Digital and Social Media Influence

6 hours

Media integration and consumer behavior, theoretical frameworks - TRA and UG, consumer behavior on digital platforms, blogs and consumer behavior, virtual and brand communities influence on consumer behavior, usage of mobile and its influence on consumer behavior, virtual shopping and its influence on consumer behavior, luxury and consumer behavior, and changing tri-component model of attitude.

#### Module:6 Information Processing and Decision Making

6 hours

Understanding information processing, information processing theories, information processing and persuasive communication, information processing and memory, methods of

	cessing, information retri	•	decisio	n making, decisi	on making
-	onsumer decision making

Course Objec	tives					
1. To evaluate	e digital marketing and digital media.					
2. To get exposed to various digital marketing channels.						
3. To develop	online ads and assess the performance of ads.					

#### **Course Outcomes**

#### At the end of the course, the students will be able to

- 1. Create digital marketing strategies for a given business scenario.
- 2. Develop search engine marketing strategy with the use of SEO and AdWords.
- 3. Formulate strategies for various digital marketing channels.
- 4. Develop ad campaigns on any one of the social media platforms and analyze its outcomes.
- 5. Know the tabs on google analytics dashboard and measure campaign performance.
- 6. Ascertain contemporary technologies of DM and its effects on DM.

# Module:1 Digital Marketing (DM) Fundamentals 6 hours Marketing basics, introduction to DM, origin and development of DM, traditional Vs digital marketing, digital marketing channels, digital customer journey and mapping, digital marketing funnel, creating buyer persona, types of digital media (paid, shared, owned, and earned), IMC in DM, developing DM strategy and objectives, and challenges to DM.

#### Module:2 Search Engine Optimization (SEO)

6 hours

Building websites and web pages, web hosting, subdomains and subfolders, website navigation, social media icons, advanced website features, setting up google analytics, search engine work mechanism, pillars of SEO, on-page and off-page optimization, SEO - visual and voice search, SEO tactics - white-hat and black-hat SEO, SEO - UX and UI, content marketing for SEO success, and external link building.

#### Module:3 Display Advertising & Search Engine Advertising 7 hours

Display advertising media, digital/ad metrics, types of display ads, targeting categories, geographic and language tagging, programmatic display advertising, ad server, ad exchange, challenges to display advertising. Search engine payments, google AdWords, Ad placements, Ad ranks, enhancing ad campaign, performance reports, and e-commerce ads Vs google ads.

# Module:4 Social Media Marketing – Facebook, LinkedIn, & 8 hours Instagram

Developing social media ad strategy - listening, goal setting, strategy, implementation, measurement, social entertainment, and gamification. Facebook marketing - organic marketing, paid marketing, marketing with 3D posts, FB ads manager, FB pixel, FB business manager, and useful design tools. Importance of LinkedIn presence, LinkedIn strategy, LinkedIn website demographics, content strategy, LinkedIn native videos, LinkedIn analytics, and ad campaign. Instagram: objectives, content strategy, style guidelines, hashtags, sponsored ads, and apps.

#### Module:5 Twitter, Mobile, and Video Marketing 6 hours

Twitter building blocks, content strategy, Twitter usage, Twitter ads, Twitter analytics, Twitter tools and tips for marketers. Mobile advertising model, mobile marketing (MM) media (paid and owned), MM features, mobile apps, website and mobile responsive ads, MM strategy, and MM analytics. Needs of video marketing (VM), VM channels, VM strategy, and types of marketing videos, video production process, video optimization, and video analytics.

Module:6	Digital Analytics and Online Reputation	6 hours
	Management (ORM)	

Data collection, key metrics, affiliate marketing, multi-channel attribution, types of tracking codes, and competitive intelligence. ORM Vs SEO, social commerce: reviews and ratings, user generated content, blogs, marketing partners, native advertising, landing page, and influencer marketing.

Module:7	Technological Advancements in DM	4 hours
Voice search,	beacon strategy, micro-moment marketing, cross device	marketing,
anthropomorphi	c AI, virtual reality (VR), augmented reality (AR), mixed r	eality (MR),
extended reality	/ (XR), chat bots, block chain technology, and role of virtual a	agents in
customer relatio	nship management.

		1.0		1.0		

- 1. To summarize, analyze, and report the data for effective business decision-making.
- 2. To comprehend the advanced analytical tools available for various business problems.
- 3. To evaluate various analytical tools and choose the appropriate tool(s) for the given problem and data.

#### **Course Outcomes**

Text Book(s)

#### At the end of the course, the students will be able to

- 1. Compare various BA tools and evaluate various data types and scales.
- 2. Examine the characteristics of data to summarize it effectively.
- 3. Apply various supervised and unsupervised learning algorithms to business problems.
- 4. Use different techniques of BA to any one of the management domains.
- 5. Create and interpret the data analysis report to make business decisions.

#### Module:1 Overview to Business Analytics (BA) 5 hours Need for business analytics, BA Vs data science, BA Vs big data, terminologies - business intelligence, machine learning algorithms - supervised and unsupervised learning, and data mining, pillars of BA, roadmap for analytics, data types and scales, data cleansing and data preparation. Module:2 **Descriptive Analytics** 9 hours Descriptive analytics - measures of central tendency and dispersion, data visualization and exploration - histogram, bar chart, scatter plot, pie chart, box plot, and tree plot, probability, probability distributions, hypotheses testing, significance value (p-value) and relationship among variables. Module:3 **Regression Techniques** 6 hours Simple linear regression and multiple linear regression (MLR), - theory, assumptions, goodness of fit, and model comparison. Applications of simple linear regression, MLR, using business problem and data. Module:4 Classification Techniques 8 hours Binary logistic regression, decision tree, KNN, Naïve Bayes, LDA - theory and evaluations of classifiers (ROC and confusion matrix). Applications of binary logistic regression decision tree, KNN, Naïve Bayes, and LDA using business problem and data. Module:5 **Clustering and Dimensionality Reduction** Basics and uses of cluster analysis (K-means and Hierarchical clustering), dimensionality reduction (FA and PCA). Interpretations to the outputs of K-means clustering, Hierarchical clustering, FA, and PCA. Module:6 Applications of BA 6 hours Domain Applications of BA: HR analytics / marketing and retail analytics / web and social media analytics / financial analytics. Module:7 **Report Writing** 3 hours Report writing - summary, problem identification, objectives, data visualization and exploration, methodology, interpretations, findings, and conclusions. Module:8 **Contemporary Topics** 2 hours

BHUM103L Micro Economics		3	0	0	3	
Pre-requisite	Pre-requisite Nil S		ylla	bus	ve	rsion
		1.0				

- 1. To enable students to understand economic concepts from a managerial perspective.
- 2. To integrate theoretical knowledge with quantitative and qualitative evidence for effective decision making.
- 3. To evaluate the consequences of market structure, pricing and competition at the domestic and global levels.

#### Course Outcome

On completion of this course the students will be able to:

- 1. Describe traditional and modern definitions of economics.
- 2. Analyse supply and demand forces that determine equilibrium in a market economy.
- 3. Evaluate the factors affecting firm behaviour, such as production and costs.
- 4. Develop the skills to apply theories, models, and graphs to analyze the national and international cases.
- 5. Discuss the behaviour of market, industry and the performance of firms under different market structures.
- 6. Examine the market failures and the role of government in dealing with those failures.

# Module:1Microeconomic Principles5 hoursIntroduction to Economics – Definition (Wealth, Welfare, Scarcity and Growth); Economics<br/>as Arts versus Science; Positive versus Normative Approaches.8 hoursModule:2Consumer Behavior Theories8 hoursOrdinal versus Cardinal approach- Law of Diminishing Marginal Utility - Indifference<br/>curveanalysis - Consumer equilibrium - Demand Analysis – movement and shift in<br/>Demand; exception to law of demand; Demandforecasting; Law of supply – Market<br/>equilibrium – Resource Allocation.

Module:3Elasticity of Demand and Supply5 hoursElasticity of Demand: Price, Income and Cross – Price elasticity's; measurement of elasticityElasticity of supply.

#### Module:4 Production Function

5 hours

Production Function; Features of Production - The Production Function with One Variable Input and The Production Function with Two Variable Inputs – Law of Returns to Scale – Iso - quant and Iso - cost line - Producer Equilibrium.

#### Module:5 | Cost and Revenue Functions

5 hours

Cost Functions – Nature of cost – Short Run cost function and Long Run cost curves - Revenue Functions – Types. Break-even analysis.

#### Module:6 Market Structure – Partial Equilibrium

8 hours

Products Markets – Perfect and Imperfect Competition- Monopoly, Monopolistic competition, Duopoly and Oligopoly, Efficiency and Regulation Factor market – Factor pricing.

#### Module:7 General Equilibrium and Economic Welfare

/ hours

General Equilibrium of Production and Exchange; Externalities - Asymmetric information, Adverse selection - Moral hazard; Pareto Optimality; Social Welfare Function.

#### Module:8 | Contemporary Issues

2 hours

Course code	Course Title			Т	Р	С				
BHUM109L Social Work and Sustainability		3	0	0	3					
Pre-requisite	Nil	Syllabus version		on						
		1.0								
Course Objective	Course Objectives									

- 1. To understand the working concept of sustainability at the micro, mezzo, and macro levels of Social Work practice.
- 2. To study the relationships among the concepts of environmental, economic, use of technology, and social sustainability.
- 3. To study the interconnectedness of sustainability with social work methods, values, and ethics.

#### **Course Outcome**

practice Model.

On completion of this course the students will be able to:

- 1. Describe various concepts of Social Work, sustainability and SDGs.
- 2. Attain a sense of responsibility in addressing sustainable goals in developing a better society.
- 3. Discuss the policies and programs from global perspectives.
- 4. Develop skills to work in the community with people of diversity.
- 5. Evaluate policies of social development and human welfare services.
- 6. Design, develop and implement programs and policies for the better world.

#### 

#### Module:2 | Social Work, Ecology, and Social Justice

5 hours

Social Work and Ecological Approaches - Human rights Violations - Rights-based approach - Restorative Approaches in Social Work - Case Studies - Role of the Social Worker in achieving sustainability.

#### Module:3 Sustainability and Vulnerability

6 hours

Introduction -Principles - Limitations - Challenges - Transdisciplinary approach to sustainability and vulnerability –Interlink of Sustainability and vulnerability.

#### Module:4 Theories in Sustainability

8 hours

Theories: Social Capital theory and Mobilization - Bottom of the pyramid approach - Humanistic sustainability theory - Social Economy theory.

Pillars: Social – Economic – Environmental – Cultural - Political - Security aspects.

#### Module:5 Pillars of Sustainability

8 hours

#### Module:6 | Sustainable Developmental Goals – I

6 hours

Goal 1: No Poverty - Goal 2: Zero Hunger - Goal 3: Good Health and Well-Being - Goal 4: Quality Education - Goal 5: Gender Equality - Goal 6: Clean Water And Sanitation - Goal 7: Affordable And Clean Energy - Goal 8: Decent Work and Economic Growth.

#### Module:7 | Sustainable Developmental Goals – II

5 hours

Goal 9: Industry, Innovation, And Infrastructure - Goal 10: Reduced Inequality - Goal 11: Sustainable Cities And Communities - Goal 12: Responsible Consumption And Production - Goal 13: Climate Action - Goal 14: Life Below Water - Goal 15: Life on Land - Goal 16: Peace and Justice Strong Institutions - Goal 17: Partnerships to achieve the goa.

#### Module:8 Contemporary Issues

2 hours

Total Lecture Hours 45 hours

BHUM110E	Cognitive Psychology	2	0	2	3
Pre-requisite	Nil	Syllabus version		sion	
		1.0			

- 1. To understand the higher order process in cognition.
- 2. To enable the students to identify and apply the different aspects of cognitive process.
- 3. To enable the students to administer various assessments for mental process.

#### **Course Outcomes**

On completion of this course the students will be able to:

- 1. Explain how information processing works.
- 2. Comprehend the various cognitive processes such as attention, perception, memory, imagery and meta cognition.
- 3. Adopt various strategies to enhance problem solving process.
- 4. Describe cognitive development and disorders.
- 5. Apply tools and techniques to understand the cognitive processes through psychometric assessment.
- 6. Conduct practical experiments to assess the cognitive skills.

#### Module:1 Cognitive Psychology

5 hours

Contemporary Cognitive Psychology, Approaches- Experimental Cognitive Psychology - Computational Cognitive Science- Cognitive Neuropsychology- Cognitive Neuroscience, Application of Cognitive Psychology.

#### Module:2 Perception and Attention

4 hours

Understanding perception, Visual and auditory- Gestalt laws of organization, Perceptual constancy - depth perception, size perception, perception of movement; Various sensory modalities; Extrasensory perception.

The nature and roles of attention- types of Attention: selective attention models of selective attention divided attention and multitasking, Endogenous and Exogenous Effects in Space.

#### Module:3 Thinking and Reasoning

4hours

Meaning and Definition- Nature- Types: Perceptual or concrete- Conceptual or abstract-Creative – Logical or reasoning - Convergent and Divergent Thinking. Thinking and intelligence: Alterations. Reasoning: Meaning- Inductive reasoning- Deductive reasoning-Abdicative reasoning.

#### Module:4 | Creativity

3hours

Meaning and Aspects of Creativity - Stages of Creativity- Creativity and Intelligence-Measurement of Creativity.

#### Module:5 | Memory

4hours

Introduction- Types- Sensory memory- Short-term memory- Working memory- Long-term memory- forgetting and false memory- Everyday memory: Autobiographical- Eyewitness testimony. Memory distortions: Reconstructive Retrieval- Encoding Distortions - Source Monitoring - Eyewitness Testimony. Meta cognition. Memory Enhancement Techniques.

#### Module:6 Problem Solving and Decision Making

4hours

Introduction- Steps, Barriers to Problem Solving: Mental Set and Functional Fixedness-Unnecessary Constraints- Irrelevant Information. Problem-Solving Strategies: Heuristic-Algorithm- Abstraction- Hypothesis testing- Means-ends analysis- Root-cause analysis- Trial and error. Decision making, hypothetical thinking and rationality. Decision-making styles.

#### Module:7 | Cognitive Development and Disorders

4hours

Cognitive Development Theories- Piaget's cognitive development- Background and key concepts- Skills & Important Milestones. Cognitive disorders -Symptoms, Causes and Effects- Types- Developmental disorders, Motor skill disorders, Dementia - Confusion- poor motor co-ordination- Loss of memory- identity confusion- impaired judgement.

Course Code	Course Title		Т	Р	С
BCLE214L	Global Warming		0	0	3
Pre-requisite	NIL	Sylla	bus v	ersio	on
Fie-requisite	INIL		1.0		

The objectives of this course is to:

- 1. Learn atmospheric dynamics and transport of heat.
- 2. Evaluate climate changes using models and predict global warming.
- 3. Acquire the concept of mitigation measures for global warming.

#### **Course Outcomes**

Upon completion of this course, the student will be able to:

- 1. Understand the principles of atmospheric dynamics and demonstrate the intimidations of global warming at global and regional level.
- 2. Understand the need for mitigation and vulnerability assessment of regional and global warming.
- 3. Critically evaluate the scientific insights of the IPCC, global policies on global warming and mitigation.
- 4. Develop climatic models to predict global warming.
- 5. Relate knowledge of science and engineering for mitigation of global warming.

#### Module:1 Introduction 5 hours

Introduction to global warming—Significance of ozone in environment—Depletion of ozone layer-Greenhouse gases-Vienna convention and Montreal protocol-Role of hydrological cycle with greenhouse gases-Carbon cycle.

#### Module:2 Characteristics of atmosphere and its effects

8 hours

Physical and chemical characteristics of atmosphere-Biogeochemistry-Atmospheric stability-Temperature profile of the atmosphere-Temperature inversion effects-Isobaric heating and cooling-Adiabatic lapse rates-Radiation, convection and advections-Sun & solar radiation-Energy balance-Terrestrial radiation and the atmosphere.

#### Module:3 | Elements of global warming

7 hours

Total carbon dioxide emissions by energy sector-industrial, commercial, transportation, residential-Impacts-air quality, hydrology, green space-Causes of global and regional climate change-Changes in patterns of temperature, precipitation and sea level rise-Greenhouse effect.

#### Module:4 | Impacts of global warming

7 hours

Roots of global warming-Temperature alteration in the atmosphere-Melting of ice Pole-sea level rise-Impacts on Ecosystem–Water Resources-Methods and Scenarios–Uncertainties in the impacts of global warming–Risk of irreversible changes –Vulnerability assessment.

#### Module:5 | Forecasting global warming with climate change models

6 hours

Developing climate models—Climate system model—Climate simulation and drift—Evaluation of climate model simulation—Regional (RCM)—Global (GCM)—Global average response to warming—Climate change observed to date.

#### Module:6 Global Policies and regulations towards global warming

5 hours

National and national legislative frameworks—UNFCCC-IPCC-Kyoto protocol-Kyoto mechanisms, clean development mechanisms, IPCC details and actions—Carbon credits-International and Regional cooperation.

#### Module:7

Mitigation measures of global warming

5 hours

Carbon sequestration and Carbon capture and storage (CCS)-Clean development mechanism (CDM)—Carbon trading-Future clean technology—Renewable and alternative energy, Green building, eco-friendly plastic.

Module:8 Contemporary issues 2 hours

#### Total Lecture Hours 45 hours

#### Text Book(s)

- 1. Robin Moilveen, Fundamentals of weather and climate, 2010, Second Edition, Oxford University Press, UK.
- 2. Neelin David J, Climate Change and Climate Modelling, 2011, First Edition, Cambridge University Press, UK.

#### **Reference Books**

Approved by Academic Council	No. 66	Date	16-06-2022

Course Code	Course Title	L	T	Р	С
BCLE215L	Waste Management	3	0	0	3
Pre-requisite	NIL	Syllabus version		ion	
Fie-requisite	IAIL		1.0	0	

The objectives of this course is to:

- 1. Understand the different sources of the waste.
- 2. Analyse the socio-economic and environmental factors for waste management.
- 3. Imply the shift of waste management in the closed loop approach.

#### **Course Outcomes**

Upon completion of this course, the student will be able to:

- 1. Understand the potential impacts of waste management.
- 2. Develop the environmental, social and economic framework towards sustainable development.
- 3. Apply sustainable development tools in regulating the waste management.
- 4. Implement life cycle analysis in waste management.
- 5. Involve in the concepts of closed loop approach and circular economy.

#### Module:1 Introduction to Waste Management

5 hours

Perspective of waste generation—Sources, impacts, characteristics, segregation and disposal of waste-Linear economy —Urbanization and new challenges in waste management—Problems associated with the waste-Relevant Regulations.

#### Module:2 | Municipal Solid Waste Management

7 hours

Sources; composition; generation-Rates; collection of waste; separation-Transfer and transport of waste-Treatment and disposal options-Landfill-Bio-mining-Incineration-Biomedical waste-Source, generation and classification-Waste management and reduction techniques.

#### **Module:3** | Hazardous Waste Management

6 hours

Characterization of waste-Compatibility and flammability of chemicals-Storage-Transport-Secured Landfills-Treatment techniques-Fundamental concepts on fate and transport of chemicals-Health effects.

#### Module:4 Radioactive Waste Management

6 hours

Sources, measures and health effects-Nuclear power plants and fuel production-Waste generation from nuclear power plants—Low level and high level waste-Management-Radiation standard by ICRP and AERB-Regulatory framework.

#### **Module:5** | Wastewater Management

5 hours

Sources and characteristics of wastewater–Primary wastewater treatment–Secondary wastewater treatment–Sludge treatment alternatives–Industrial wastewater treatment–Zero Liquid Discharge–Wastewater disposal methods.

#### Module:6 | Emerging waste

9 hours

Sources and Characteristics of Plastic waste, marine plastic waste, microplastic, E-waste, Agriculture waste, Glass waste, Metal waste, Oil and gas exploration and production of waste, Space waste, Construction material waste-Recycling non-biodegradable waste, Tyre recycling, End of life textiles, Recovery of value added products, Reuse of waste.

#### Module:7 | Closed Loop Approach Towards Circular Economy

5 hours

Introduction to the Circular Economy-Transition from Linear to Circular Economy-Closed loop supply chain-Integrated waste refinery-Sustainable Development Goals (SDGs)-

Circular Economy policies towards Sustainable Development.							
Module:8	ule:8 Contemporary issues

Course Code	Course Title	L	Т	Р	С	
BCLE216L	Water Resource Management		0	0	3	
Dro roquicito	NIL		Syllabus version			
Pre-requisite			1.0			

The objectives of this course is to:

- 1. Acquire the basic principles of water resources and its planning and management.
- 2. Enhance the knowledge on recent technologies in assessing the water resources.
- 3. Identify the challenges facing water management in varied climate types around the world.

#### **Course Outcomes**

Upon completion of this course, the student will be able to:

- 1. Understand the planning of water resources and need for water resource management.
- 2. Understand the water resource potential in global, India scenario and explore the water resources using different technologies.
- 3. Acquire a knowledge international and national water law and its policy.
- 4. Explain the concept of water in agricultural and economic aspects.
- 5. Predict the future trends of water demand and its management during crisis.

### Module:1 Water, A Multi-Dimensional Resource 5 hours

Water resources planning-Multi-dimensional management-Water withdrawal and consumption by sector-Stress, international policy-Climate change, oceans, challenges and need for water resource management.

#### Module:2 Global and Indian Scenario for Water Resources

4 hours

Surface Water and Groundwater Global and Indian Scenario-Quality of water resources-Water use and sustainable reuse methods-Usable water resources by continent and country-Water footprint.

#### Module:3 | Water Resources Assessment

5 hours

Network design-Stream flow gauging-Weir design-Gauges-Current gauging-Salt dilution-Geophysical exploration-Test drilling-Application of remote sensing techniques.

#### Module:4 | Water in Agricultural Systems

7 hours

Water for food production, virtual water trade for achieving global water security, irrigation efficiencies, irrigation methods and current water pricing, water for livestock and processing, water pollution from agricultural production

#### Module:5 | Water Economics

8 hours

Economic characteristics of water good and services-Nonmarket monetary valuation methods-Water economic instruments-Policy options for water conservation and sustainable use, pricing, distinction between values and charges-Private sector involvement in water resources management.

#### Module:6 | Water Legal and Regulatory Settings

8 hours

National and International Framework for Water Law; Basic structure of water law- An overview of water law in India -Evolution of water law, key features of water law, evolving water law and policy-Water policy for Irrigation, decentralization and participation in irrigation management, and the policy measures proposed to establish water user associations. National level initiatives for regulation of groundwater, State groundwater laws and rainwater harvesting.

	T				1		
Module:7	dule:7 Demand Management						
Balancing supply and demand-Economic theory of supply and demand-management by use of tariffs-Timing, long-term, operational time-frame-Crisis management-Cost of water-Future trends-Economic value of water-Loss control-Water harvesting.							
Module:8	lodule:8 Contemporary issues				2 hours
